Contents

CHAPTER 1

Vector Analysis and Electromagnetic Fields in Free Space 1

1-1 Scalar and Vector Fields 1
1-2 Vector Sums 3
1-3 Product of a Vector and a Scalar 4
1-4 Coordinate Systems 4
1-5 Differential Elements of Space 7
1-6 Position Vector 10
1-7 Scalar and Vector Products of Vectors 14
1-8 Vector Integration 19
1-9 Electric Charges, Currents, and Their Densities 23
1-10 Electric and Magnetic Fields in Terms of Their Forces 27
1-11 Maxwell's Integral Relations for Free Space 29
1-12 Units and Dimensions 50

CHAPTER 2

Vector Differential Relations and Maxwell's Differential Relations in Free Space 60

2-1 Differentiation of Vector Fields 60
2-2 Gradient of a Scalar Function 62
2-3 The Operator ∇ (Del) 65
2-4 Divergence of a Vector Function 67
2-5 Curl of a Vector Field 78

2-6 Summary of Maxwell's Equations: Complex, Time-Harmonic Forms 88
2-7 Laplacian and Curl Curl Operators 92
2-8 Green's Integral Theorems; Uniqueness 97
2-9 Wave Equations for Electric and Magnetic Fields in Free Space 99
2-10 Uniform Plane Waves in Empty Space 102

CHAPTER 3

Maxwell's Equations and Boundary Conditions for Material Regions at Rest 116

3-1 Electrical Conductivity of Metals 117
3-2 Electric Polarization; and Div **D** for Materials 121
3-3 Div **B** for Materials; Its Integral Form and a Boundary Condition for Normal **B** 134
3-4 Magnetic Polarization; and **Curl H** for Materials 134
3-5 Maxwell's **Curl E** Relation, Its Integral Form and Boundary Condition for Tangential **E** 158
3-6 Uniform Plane Waves in an Unbounded Conductive Region 162
3-7 Classification of Conductive Media 171
3-8 Linearity, Homogeneity, and Isotropy in Materials 174
3-9 Electromagnetic Parameters of Typical Materials 180

CHAPTER 4

Static and Quasi-Static Electric Fields 186

4-1 Maxwell's Equations for Static Electric Fields 186
4-2 Static Electric Fields of Fixed Charge Ensembles in Free Space 188
4-3 Conservation of Electric Charge 191
4-4 Gauss' Law and Static Conductor-Dielectric Systems 194
4-5 Electrostatic Scalar Potential 195
4-6 Capacitance 203
4-7 Energy of the Electrostatic Field 206
4-8 Poisson's and Laplace Equations 212
4-9 Uniqueness of Electrostatic Field Solutions 215
4-10 Laplace's Equation and Boundary-Value Problems 218
4-11 Image Methods 225
4-12 An Approximation Method for Statically Charged Conductors 232
4-13 Capacitance of Two-Dimensional Systems by Field Mapping 235
4-14 General Boundary Conditions for Normal **D** and **J** 240

4-15 Conductance Analog of Capacitance 245
4-16 Electrostatic Forces and Torques 255

CHAPTER 5

Static and Quasi-Static Magnetic Fields 269

5-1 Maxwell's Equations and Boundary Conditions for Static Magnetic Fields 269
5-2 Ampère's Circuital Law 270
5-3 Magnetic Circuits 274
5-4 Vector Magnetic Potential 280
5-5 An Integral Solution for A in Free Space; Biot–Savart Law 281
5-6 Quasi-Static Electromagnetic Fields 288
5-7 Open-Circuit Induced Voltage 290
5-8 Motional Electromotive Force and Voltage 293
5-9 Induced Emf from Time-Varying Vector Magnetic Potential 299
5-10 Voltage Generators and Kirchhoff's Laws 303
5-11 Magnetic Energy and Self-Inductance 311
5-12 Coupled Circuits and Mutual Inductance 336
5-13 Magnetic Forces and Torques 347

CHAPTER 6

Normal-Incidence Wave Reflection and Transmission at Plane Boundaries 363

6-1 Boundary-Value Problems 363
6-2 Reflection from a Plane Conductor at Normal Incidence 365
6-3 Wave Solutions Using Real-Time and Complex Fields 369
6-4 Two-Region Reflection and Transmission 371
6-5 Normal Incidence for More Than Two Regions 374
6-6 Solution Using Reflection Coefficient and Wave Impedance 377
6-7 Graphical Solutions Using the Smith Chart 383
6-8 Standing Waves 391

CHAPTER 7

The Poynting Theorem and Electromagnetic Power 401

7-1 The Theorem of Poynting 401
7-2 Time-Average Poynting Vector and Power 411
7-3 Time-Average Poynting Vector and Time-Harmonic Fields 417

CHAPTER 8

Mode Theory of Waveguides 427

8-1 Maxwell's Relations When Fields Have $e^{j\omega t \mp \gamma z}$ Dependence 429
8-2 TE, TM, and TEM Mode Relationships 433
8-3 TM Mode Solutions of Rectangular Waveguides 438
8-4 TE Mode Solutions of Rectangular Waveguides 450
8-5 Dispersion in Hollow Waveguides: Group Velocity 464
8-6 Wall-Loss Attenuation in Hollow Waveguides 473

CHAPTER 9

TEM Waves on Two-Conductor Transmission Lines 484

9-1 Electrostatic Potential and the TEM Mode Fields 486
9-2 Wave Impedance and Propagation Constant of the TEM Mode 493
9-3 Voltage and Current Waves; Characteristic Impedance 498
9-4 Transmission-Line Parameters, Perfect Conductors Assumed 500
9-5 Circuit Model of a Line with Perfect Conductors 510
9-6 Wave Equations for a Line with Perfect Conductors 512
9-7 Transmission-Line Parameters, Conductor Impedance Included 513

CHAPTER 10

Analysis of Reflective Transmission Lines 541

10-1 Voltage and Current Calculation on Lines with Reflection 542
10-2 Smith Chart Analysis of Transmission Lines 550
10-3 Standing Waves on Transmission Lines 557
10-4 Analytical Expressions for Line Impedance 562
10-5 Impedance-Matching: Stub-Matching of Lossless Lines 568
10-6 Nonsinusoidal Waves on Lossless Lines 571

CHAPTER 11

Radiation from Antennas in Free Space 592

11-1 Wave Equations in Terms of Electromagnetic Potentials 593
11-2 Integration of the Inhomogeneous Wave Equation in Free Space 596
11-3 Radiation from the Infinitesimal Current–Element 602
11-4 Radiation Fields of a Linear, Center-Fed, Thin-Wire Antenna 608
11-5 Symmetric Maxwell's Equations and Their Vector Potentials; the Field Equivalence Theorem 618

APPENDIX

Energy and Power Concepts of Circuit Theory 636

Index 645
