**PART 1
OVERVIEW**

**CHAPTER 1
INTRODUCTION**

1

Outline	2
1.1 Opening Remarks	3
1.2 What is an Operating System?	3
1.3 Early History: The 1940s and The 1950s	4
1.4 The 1960s	4
1.5 The Emergence of a New Field: Software Engineering	6
1.6 The 1970s	6
1.7 The 1980s	6
1.8 The 1990s and Beyond	7
1.9 Distributed Computing	8
1.10 The Key Architectural Trend: Parallel Computation	9
1.11 Input-Output Trends	10
1.12 Open Systems	11
1.13 UNIX	12
1.14 Ethical Issues	13
1.15 Application Bases	13
1.16 The Key Operating Systems for the 1990s	14
Appendix: Open System Organizations	20

**CHAPTER 2
HARDWARE, SOFTWARE, FIRMWARE 21**

Outline	22
2.1 Introduction	24
2.2 Hardware	24
2.3 Software	30
2.4 Firmware	34
Summary	42

**PART 2
PROCESS MANAGEMENT**

**CHAPTER 3
PROCESS CONCEPTS 49**

Outline	50
3.1 Introduction	51
3.2 Definitions of “Process”	51
3.3 Process States	51
3.4 Process State Transitions	52
3.5 The Process Control Block	53
3.6 Operations on Processes	54
3.7 Suspend and Resume	56
3.8 Interrupt Processing	57
3.9 The Nucleus of the Operating System	61
Summary	63

**CHAPTER 4
ASYNCHRONOUS CONCURRENT PROCESSES 71**

Outline	72
4.1 Introduction	73
4.2 Parallel Processing	73
4.3 A Control Structure for Indicating Parallelism: Parbegin/Parend	74
4.4 Mutual Exclusion	75
4.5 Critical Sections	76
4.6 Mutual Exclusion Primitives	77
4.7 Implementing Mutual Exclusion Primitives	78
4.8 Dekker’s Algorithm	78
4.9 Peterson’s Algorithm	85
4.10 N-Process Mutual Exclusion	87
4.11 A Hardware Solution to Mutual Exclusion: The Testandset Instruction	87
4.12 Semaphores	89
4.13 Process Synchronization with Semaphores	89
4.14 The Producer-consumer Relationship	90

4.15	Counting Semaphores	92
4.16	Implementing Semaphores, P and V	92
4.17	Eventcounts and Sequencers	94
	Summary	96

**CHAPTER 5
CONCURRENT PROGRAMMING 111**

	Outline	112
5.1	Introduction	113
5.2	Critical Regions and Conditional Critical Regions	114
5.3	Monitors	115
5.4	Path Expressions	121
5.5	Message Passing	121
5.6	Ada: A Key Concurrent Programming Language for the 1990s	124
	Summary	135

**CHAPTER 6
DEADLOCK AND INDEFINITE POSTPONEMENT 153**

	Outline	154
6.1	Introduction	155
6.2	Examples of Deadlock	155
6.3	A Related Problem: Indefinite Postponement	158
6.4	Resource Concepts	158
6.5	Four Necessary Conditions for Deadlock	159
6.6	Major Areas of Deadlock Research	160
6.7	Deadlock Prevention	160
6.8	Deadlock Avoidance and the Banker's Algorithm	164
6.9	Deadlock Detection	168
6.10	Deadlock Recovery	170
6.11	Deadlock Considerations in Future Systems	172
	Summary	173

**PART 3
STORAGE MANAGEMENT**

**CHAPTER 7
REAL STORAGE 285**

	Outline	186
7.1	Introduction	187
7.2	Storage Organization	187
7.3	Storage Management	187
7.4	Storage Hierarchy	188
7.5	Storage Management Strategies	188

7.6	Contiguous vs. Noncontiguous Storage Allocation	190
7.7	Single User Contiguous Storage Allocation	190
7.8	Fixed Partition Multiprogramming	193
7.9	Variable Partition Multiprogramming	197
7.10	Multiprogramming with Storage Swapping	201
	Summary	203

**CHAPTER 8
VIRTUAL STORAGE ORGANIZATION 213**

	Outline	214
8.1	Introduction	215
8.2	Evolution of Storage Organizations	215
8.3	Virtual Storage: Basic Concepts	215
8.4	Multilevel Storage Organization	217
8.5	Block Mapping	218
8.6	Paging: Basic Concepts	221
8.7	Segmentation	230
8.8	Paging/Segmentation Systems	237
	Summary	241

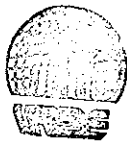

**CHAPTER 9
VIRTUAL STORAGE MANAGEMENT 251**

	Outline	252
9.1	Introduction	253
9.2	Virtual Storage Management Strategies	253
9.3	Page Replacement Strategies	253
9.4	Locality	259
9.5	Working Sets	261
9.6	Page Fault Frequency Page Replacement	264
9.7	Demand Paging	264
9.8	Antic	
9.9	Page Release	266
9.10	Page Size	267
9.11	Program Behavior under Paging	268
	Summary	271

**PART 4
PROCESSOR MANAGEMENT**

**CHAPTER 10
JOB AND PROCESSOR SCHEDULING 285**

	Outline	286
10.1	Introduction	287
10.2	Scheduling Levels	287

10.3 Scheduling Objectives	287
10.4 Scheduling Criteria	289
10.5 Preemptive vs. Nonpreemptive Scheduling	290
10.6 The Interval Timer or Interrupting Clock	291
10.7 Priorities	291
10.8 Deadline Scheduling	292
10.9 First-In-First-Out (FIFO) Scheduling	292
10.10 Round Robin (RR) Scheduling	293
10.11 Quantum Size	294
10.12 Shortest-Job-First (SJF) Scheduling	295
10.13 Shortest-Remaining-Time (SRT) Scheduling	295
10.14 Highest-Response-Ratio-Next (HRN) Scheduling	296
10.15 Multilevel Feedback Queues	296
10.16 Fair Share Scheduling	299
10.17 Sun UNIX Process Scheduling	301
10.18 VAX/VMS Process Scheduling	301
Summary	301

CHAPTER 11

DISTRIBUTED COMPUTING: THE PARALLEL COMPUTATION VIEW

313

Outline	314
11.1 Introduction	316
11.2 The Fifth Generation Project and the Strategic Computing Initiative	316
11.3 Supercomputer Projects	316
11.4 Classification of Sequential and Parallel Architectures	317
11.5 Pipelining	318
11.6 Vector Processing	318
11.7 Array Processors	318
11.8 Data Flow Computers	319
11.9 Multiprocessors	319
11.10 Fault Tolerance	320
11.11 Computational Complexity Issues	321
11.12 Detecting Parallelism	322
11.13 The "Never Wait" Rule	324
11.14 Processor Interconnection Schemes	325
11.15 Loosely-Coupled Vs. Tightly-Coupled Systems	329
11.16 Fetch-and-Add	330
11.17 Multiprocessor Operating System Organizations	332
11.18 Case Study: C.mmp and Cm*	334
11.19 Case Study: The Butterfly	334
11.20 Case Study: The Connection Machine	340
Summary	346
Appendix: Organizations Researching and Developing Highly-parallel Computers	357

PART 5 AUXILIARY STORAGE MANAGEMENT

CHAPTER 12 DISK PERFORMANCE OPTIMIZATION 359

Outline	360
12.1 Introduction	361
12.2 Operation of Moving-Head Disk Storage	361
12.3 Why Disk Scheduling Is Necessary	363
12.4 Desirable Characteristics of Disk Scheduling Policies	364
12.5 Seek Optimization	365
12.6 Rotational Optimization	370
12.7 Systems Considerations	370
12.8 Disk Caching	373
12.9 Other Performance Enhancement Techniques	374
12.10 RAM Disks	375
12.11 Optical Disks	376
Summary	376

CHAPTER 13 FILE AND DATABASE SYSTEMS 387

Outline	388
13.1 Introduction	389
13.2 The File System	389
13.3 File System Functions	391
13.4 The Data Hierarchy	391
13.5 Blocking and Buffering	392
13.6 File Organization	392
13.7 Queued and Basic Access Methods	394
13.8 Allocating and Freeing Space	394
13.9 File Descriptor	400
13.10 Access Control Matrix	400
13.11 Access Control by User Classes	401
13.12 Backup and Recovery	402
13.13 File Servers	403
13.14 Distributed File Systems	403
13.15 CD-ROMs, WORMs, and Magneto-Laser Disks	403
13.16 Database Systems	404
13.17 Database Models	406
Summary	410

PART 6 PERFORMANCE

CHAPTER 14 PERFORMANCE COPROCESSORS, RISC, AND DATA FLOW 419

Outline	420
14.1 Introduction	421
14.2 Important Trends Affecting Performance Issues	421
14.3 Why Performance Monitoring and Evaluation Are Needed	421
14.4 Performance Measures	422
14.5 Performance Evaluation Techniques	424
14.6 Bottlenecks and Saturation	429
14.7 Feedback Loops	429
14.8 Coprocessors	430
14.9 Reduced Instruction Set Computing (RISC)	431
14.10 Case Study: Data Flow, RISC, and Pipelining	434
Summary	438
Appendix: Companies with Commitments to RISC-based Architectures	452

CHAPTER 15 ANALYTIC MODELING 453

Outline	454
15.1 Introduction	455
15.2 Queueing Theory	455
15.3 Markov Processes	471
Summary	479

PART 7 NETWORKS AND SECURITY

CHAPTER 16 DISTRIBUTED COMPUTING: THE OPEN SYSTEMS INTERCONNECTION VIEW 489

Outline	490
16.1 Introduction	492
16.2 Network Architecture: OSI and Other Reference Models	496
16.3 The Application Layer (Layer 7)	502

16.4	The Presentation Layer (Layer 6)	504
16.5	The Session Layer (Layer 5)	504
16.6	The Transport Layer (Layer 4)	505
16.7	The Network Layer (Layer 3)	505
16.8	The Data Link Layer (Layer 2)	506
16.9	The Physical Layer (Layer 1)	511
16.10	Transmission Media	512
16.11	OSI Network Management	513
16.12	OSI Security	513
16.13	Integrated Digital Services Digital Network (ISDN)	514
16.14	MAP, TOP, and GOSIP	514
16.15	OSI Testing	515
16.16	Transmission Control Protocol/Internet Protocol (TCP/IP)	515
16.17	The Future of OSI	516
	Appendix: OSI-oriented Standards	525

**CHAPTER 17
OPERATING SYSTEMS SECURITY**

527

	Outline	528
17.1	Introduction	530
17.2	Security Requirements	531
17.3	A Total Approach to Security	532
17.4	External Security	532
17.5	Operational Security	532
17.6	Surveillance	533
17.7	Threat Monitoring	533
17.8	Amplification	533
17.9	Password Protection	534
17.10	Auditing	535
17.11	Access Controls	535
17.12	Security Kernels	535
17.13	Hardware Security	536
17.14	Fault-Tolerant Systems	536
17.15	Capabilities and Object-Oriented Systems	537
17.16	Case Study: The Object-Oriented Architecture of the IBM System/38	539
17.17	Cryptography	540
17.18	Operating System Penetration	543
17.19	Case Study: Penetrating an Operating System	546
17.20	UNIX Operating System Security	548
17.21	Worms and Viruses	549
	Summary	554
	Appendix: Information Sources	565

PART 8 CASE STUDIES

CHAPTER 18	
CASE STUDY: UNIX SYSTEMS	567
Outline	568
18.1 Introduction	570
18.2 History	571
18.3 The Shell	573
18.4 The Kernel	575
18.5 The File System	576
18.6 Process Management	582
18.7 Memory Management	587
18.8 The Input/Output System	590
18.9 The SunOS Operating System	593
18.10 Distributed UNIX Systems	596
18.11 UNIX Systems Standardization and Open Systems	602
18.12 The Future of UNIX Systems	605
Appendix A: Information Sources	618
Appendix B: A Tour of the AT&T System V Interface Definition (SVID)	619
CHAPTER 19	
CASE STUDY: MS-DOS, DOS	629
Outline	630
19.1 Introduction	632
19.2 Early History of MS-DOS	633
19.3 MS-DOS Version 1.0	634
19.4 MS-DOS Version 2.0	635
19.5 MS-DOS Version 3.0	637
19.6 The IBM Personal System/2	638
19.7 The Micro Channel	639
19.8 MS-DOS 3.3	639
19.9 Operating System/2 Standard Edition	640
19.10 Operating System/2 Extended Edition	641
19.11 Systems Application Architecture	641
19.12 The User's View of MS-DOS	642
19.13 The Systems's View of MS-DOS	646
19.14 The Programmer's View of MS-DOS System Calls	655
19.15 DOS 4.0	660
19.16 The Future of MS-DOS and OS/2	661
Appendix: Information Sources	667

CHAPTER 20 **669**
CASE STUDY: MVS

Outline	670
20.1 History of MVS	672
20.2 MVS Design Objectives and Capabilities	672
20.3 System/370 Hardware	674
20.4 Storage Management	676
20.5 MVS/XA Address Spaces	680
20.6 Multiprocessing	681
20.7 Managing System Resources	685
20.8 Supervising the Execution of Work	686
20.9 Input/Output	689
20.10 Job Entry Subsystem	691
20.11 Monitoring System Activity	693
20.12 Enterprise Systems Architecture and MVS/ESA	694
20.13 The Future of MVS	696

CHAPTER 21 **703**
CASE STUDY: VM: A VIRTUAL MACHINE OPERATING SYSTEM

Outline	704
21.1 Introduction	705
21.2 History	710
21.3 The Control Program (CP)	711
21.4 The Conversational Monitor System (CMS)	718
21.5 Remote Spooling and Communications Subsystem	718
21.6 Strengths of VM	720
21.7 VM/370 Evolution	721
21.8 Performance Considerations	721
21.9 Reliability, Availability, and Serviceability	723
21.10 The Versions of VM	724
21.11 AIX/370	725
21.12 UNIX vs. VM	725
21.13 VM/SP Extensions	726
21.14 VM: IBM's Large-Scale Operating System for the 1990s?	726
Appendix: Other IBM Publications	732

CHAPTER 22 **733**
CASE STUDY: INSIDE THE APPLE MACINTOSH

Outline	734
22.1 Introduction	737
22.2 History	737
22.3 Hardware	738
22.4 Software	741
22.5 Resource Manager	744

22.6 QuickDraw	744
22.7 Font Manager	744
22.8 Toolbox Event Manager	745
22.9 Window Manager	747
22.10 Control Manager	747
22.11 Menu Manager	748
22.12 TextEdit	749
22.13 Dialog Manager	749
22.14 Desk Manager	750
22.15 Package Manager	750
22.16 Memory Manager	751
22.17 Segment Loader	753
22.18 Operating System Event Manager	754
22.19 File Manager	754
22.20 Printing Manager	759
22.21 Device Manager	761
22.22 System Error Handler	770
22.23 Operating System Utilities	770
22.24 The Evolving Macintosh Family	771
22.25 Macintosh Plus Operating System Enhancements	773
22.26 Macintosh SE and Macintosh II Operating System Enhancements	773
22.27 The Future of the Macintosh	774
Appendix: Information Sources	779

CHAPTER 23

CASE STUDY: OS/2

781

Outline	782
23.1 Introduction	784
23.2 History	784
23.3 Design Overview	785
23.4 Multitasking	788
23.5 Dynamic Linking	793
23.6 The File System	794
23.7 Memory Management	795
23.8 Interprocess Communication	799
23.9 The Presentation Manager and VIO	803
23.10 Device Monitors	804
23.11 Data Integrity	807
23.12 Timer Services	807
23.13 Device Drivers	808
23.14 The Compatibility Box	814
23.15 System Configuration	815
23.16 OS/2 Software Developer's Kit	816
23.17 Handling Errors and Exceptions	816
23.18 The Future	816
Appendix: Summary of OS/2 Commands	827

Index
