INDICE

Preface	XV
1 Introduction	1
1.1 Uses of compueter Networks 1.1.1 Networks for companies	3
1.1.2 Networks for people	4
1.1.3 Social issues	6
1.2 Network hardware	7
1.2.1 Local area Networks	9
1.2.2 Metropolitan area Networks	10
1.2.3 Wide area Networks	11
1.2.4 Wireless Networks	13
1.2.5 Internetworks 1.3 Network software	16
1.3.1 Protocol hierarchies	17
1.3.2 Design issues for e layers	21
1.3.3 Interfaces and services	22
1.3.3 Connection-oriented and connectionless services	23
1.3.5 Service primitive	25
1.3.6 The relationships of services to protocols	27
1.4 Reference models 1.4.1 The OSI reference model	28
1.4.2 The TCP/IP reference model	35
1.4.3 A comparison of the OSI and TCP reference models	38
1.4.4 A critique of the OSI model and protocols	40
1.4.5 A critique of the TCP/IP reference model	43
1.5 example networks	44
1.5.1 Novell NetWare	45
1.5.2 the ARPANET	47
1.5.3 NSFNET	50
1.5.4 The internet	52
1.5.5 Gigabit testbeds	54
1.6 Example data communications services	56
1.6.1 SMDS-switched multimegabit data services	57
1.6.2 X.25 networks	59
1.6.3 Frame relay	60
1.6.4 Broadband ISDN and ATM	61
1.6.5 comparison of services 1.7 Networks standardizations	66
1.7.1 Who’s who in the telecommunications world	67
1.7.2 Who’s who in the international standards world	69
1.7.3 Who’s who in the internet standards world	70
1.8 Outline of the rest of the book	72
1.9 Summary	73
2 The physical layer 2.1 The theoretical basis for data communication	77
2.1.1 Fourier analysis 2.1.2 Bandwidth-limited signals	78

2.1.3 The maximum data rate of a channel	81
2.2. Transmission media 2.2.1 Magnetic media	82
2.2.2 Twisted pair	83
2.2.3 Baseband coaxial cable	84
2.2.4 Broadband coaxial cable	85
2.2.5 Fiber optics	87
2.3 Wireless transmissions 2.3.1 The electromagnetic spectrum	94
2.3.2 Radio transmission	97
2.3.3 Microwave transmission	98
2.3.4 Infrared and millimeter waves 2.3.5 Lightware transmission	100
2.4 The telephone system	102
2.4.1 Structure of the telephone system	103
2.4.2 The politics of telephones	106
2.4.3 The local loop	108
2.4.4 trunks and multiplexing	118
2.4.5 Switching	130
2.5 Narrowband ISDN	139
2.5.1 ISDN services 2.5.2 ISDN system architecture	140
2.5.3 The ISDN interface	142
2.5.4 Perspective on N-ISDN	143
2.6 Broadband ISDN and TAM	144
2.6.1 Virtual circuits versus circuit switching	145
2.6.2 Transmission in ATM Networks	146
2.6.3 ATM switches	147
2.7 Cellular radio 2.7.1 Paging systems	155
2.7.2 Cordless telephones 2.7.3 analog cellular telephones	157
2.7.4 Digital cellular telephones 2.7.5 Personal communications services	162
2.8 Communications satellites	163
2.8.1 Geosynchronous satellites	164
2.8.2 low-orbit satellites	167
2.8.3 Satellites versus fiber	168
2.9 Summary	170
3 The data link layer	175
3.1 Data link layer design issues 3.1.1 Services provided to the network layer	176
3.1.2 Framing	179
3.1.3 Error control	182
3.1.4 Flow control 3.2 Error detection and correction	183
3.2.1 Error-correcting codes	184
3.2.2 Error-detecting codes	186
3.3. Elementary data link protocols	190

3.3.1 An unrestricted simplex protocol 3.3.2 A simplex stop-and-wait protocol	195
3.3.3 A simplex protocol for a noisy channel	197
3.4 Sliding window protocols	202
3.4.1 A one bit sliding window protocol	206
3.4.2 A protocol using go back n	207
3.4.3 A protocol using selective repeat	213
3.6 Example data link protocols 3.6.1 HDLC-high-level data link control	225
3.6.2 The data link layer in the internet	229
3.6.3 The data link layer in ATM	235
3.7 Summary	239
4 The medium access sublayer	243
4.1. The channel allocation problem 4.1.1 Static channel allocation in LANs and MANs	244
4.1.2 Dynamic channel allocation in LANs and MANs	245
4.2 Multiple access protocols 4.2.1 ALOHA	246
4.2.2 Carrier sense multiple access protocols	250
4.2.3 Collision-free protocols	254
4.2.4 Limited-contention protocols	256
4.2.5 Wavelength division multiple access protocols	260
4.2.6 Wireless LAN protocols	262
4.2.7 Digital cellular radio	266
4.3. IEEE standard 802 for LANs and MANs	275
4.3.1 IEEE standard 802.3 and Ethernet	276
4.3.2 IEEE standard 802.4: token bus	287
4.3.3 IEEE standard 802.5: token ring	292
4.3.4 Comparison of 802.3, 802.4, 802.5	299
4.3.5 IEEE standard 802.6: distributed queue dual bus	301
4.3.6 IEEE standard 802.2: logical link control	302
4.4 Bridges	304
4.4.1 Bridges from 802.x to 802.y	307
4.4.2 Transparent Bridges	310
4.4.3 Source routing Bridges	314
4.4.4 Comparison of 802 Bridges	316
4.4.5 Remote Bridges	317
4.5 High-speed LANs	318
4.5.1 FDDI	319
4.5.2 Fat Ethernet	322
4.5.3 HIPPI-high-performance parallel interface	325
4.5.4 Fibre channel	326
4.6 Satellite networks	327
4.6.1 Polling	328
4.6.2 ALOHA	329
4.6.3 FDM 4.6.4 TDM	330
4.6.5 CDMA 4.7 Summary	333

5 The network layer	
5.1.Nnetwork layer design issues	339
5.1.1 Services provided to the transport layer	340
5.1.2 Internal organization of the network layer	342
5.1.3 Comparison of virtual circuit and datagram subnets	344
5.2 Routing algorithms	
5.2.1 The optimality principle	345
5.2.2 Shortest path routing	349
5.2.3 Flooding	351
5.2.4 Flow-based routing	353
5.2.5 Distance vector routing	355
5.2.6 Link state routing	359
5.2.7 Hierarchical routing	365
5.2.8 Routing for mobile hosts	367
5.2.9 Broadcast routing	370
5.2.10 Multicast routing	372
5.3 Congestion control algorithms	374
5.3.1 General principles of congestion control	376
5.3.2 Congestion prevention policies	378
5.3.3 Traffic shaping	379
5.3.4 Flow specifications	384
5.3.5 Congestion control in virtual circuit subnets	386
5.3.6 Choke packets	387
5.3.7 Load shedding	390
5.3.8 Jitter control	392
5.3.9 Congestion control for multicasting	393
5.4 Internetworking	396
5.4.1 How networks differ	399
5.4.2 Concatenated virtual circuits	401
5.4.3 Connectionless internetworking	402
5.4.4 Tunneling	404
5.4.5 Internetworking routing	405
5.4.6 Fragmentation	406
5.4.7 Firewalls	410
5.5 The network layer in the Internet	412
5.5.1 The IP Protocol	413
5.5.2 IP addresses	416
5.5.3 Subnets	417
5.5.4 Internet control protocols	419
5.5.5 the interior gateway routing protocol: OSPF	424
5.5.6 The exterior gateway routing protocol: BGP	429
5.5.7 Internet multicasting	431
5.5.8 Mobile IP	432
5.5.9 CIDR-Classless interdomain routing	434
5.6 The network layer in ATM networks	449
5.6.1 Cell formats	450
5.6.2 Connection setup	452
5.6.3 Routing and switching	455
5.6.4 Service categories	458

5.6.5 Quality of service	460
5.6.6 Traffic shaping and policing	463
5.6.7 Congestion control	467
5.6.8 ATM LANs	471
5.7 Summary	473
6 The transport layer 6.1 The transport service 6.1.1 Services provided to the upper layers	479
6.1.2 Quality of service	481
6.1.3 Transport service primitives	483
6.2 Elements of transport protocols	488
6.2.1 Addressing	489
6.2.2 Establishing a connection	493
6.2.3 Releasing a connection	498
6.2.4 Flow control and buffering	502
6.5.5 Multiplexing	506
6.2.6 Crash recovery	508
6.3 A simple transport protocol 6.3.1 The example service primitive	510
6.3.2 The example transport entity	512
6.3.3 The example as a finite state machine	519
6.4 The internet transport protocols (TCP and UDP)	521
6.4.1 The TCP service model	523
6.4.2 The TCP protocol	524
6.4.3 The TCP segment header	526
6.4.4 TCP connection management	529
6.4.5 TCP transmission policy	533
6.4.6 TCP congestion control	536
6.4.7 TCP timer management	539
6.4.8 UDP	542
6.4.9 Wireless TCP and UDP	543
6.5 The ATM AAL layer protocols	545
6.5.1 Structure of the ATM adaptation layer	546
6.5.2 AAL 1	547
6.5.3 AAL 2	549
6.5.4 AAL 3/4	550
6.5.5AAL 5	552
6.5.6 Comparison of AAL protocols	554
6.5.7 SSCOP-service specific connection-oriented protocol 6.6 Performance issues	555
6.6.1 Performance problems in computer networks	556
6.6.2 Measuring network performance	559
6.6.3 System design for better performance	561
6.6.4 Fast TPDU processing	565
6.6.5 Protocols for gigabit networks	568
6.7 Summary	572
7 The application layer 7.1. Network security	577
7.1.1 Traditional cryptography	580

7.1.2 Two fundamental cryptography principles	585
7.1.3 Secret-key algorithms	587
7.1.4 Public- key algorithms	597
7.1.5 Authentication protocols	601
7.1.6 Digital signatures	613
7.1.7 Social issues	620
7.2 DNS-domain name system 7.2.1 The DNS name space	622
7.2.2 Resource records	624
7.2.3 Name servers	628
7.3 SNMP-simple network management protocol	630
7.3.1 The SNMP model	631
7.3.2 ASN.1-abstract syntax notation 1	633
7.3.3 SMI-structure of management information	639
7.3.4 The MIB-management information base	641
7.4 Electronic mail	643
7.4.1 Architecture and services	645
7.4.2 The user agent	646
7.4.3 Message formats	650
7.4.4 Message transfer	657
7.4.5 Email privacy	663
7.5 Usenet news	669
7.5.1 The user view of USENET	670
7.5.2 How USENET is implemented	675
7.6 The world wide web	681
7.6.1 The client side	682
7.6.2 The server side	685
7.6.3 Writing a web page in HTML	691
7.6.4 Java	706
7.6.5 Locating information on the web	720
7.7 Multimedia	723
7.7.1 Audio	724
7.7.2 Video	727
7.7.3 Data compression	730
7.7.4 Video on demand	744
7.7.5 MBone-multicast backbone	756
7.8 Summary	760
8 Reading list and bibliography 8.1 Suggestions for further reading	767
8.1.1 Introduction and general works	768
8.1.2 The physical layer	769
8.1.3 The data link layer 8.1.4 The medium access control sublayer	770
8.1.5 The network layer	771
8.1.6 The transport layer 8.1.7 The application layer	772
8.2 Alphabetical bibliography	775
Index	795
