

Acknowledgments	vi
Summary	vii
1 Introduction	1
2 Economic Analysis—The Options	5
3 Economic Analysis in Context	7
4 The Groundwork for Economic Analysis	11
Problem and objective definition	11
Identification of alternatives	12
Public/private question	14
Level of analysis	16
Description of alternatives	17
5 Estimating Costs	19
What costs to include	20
Sources of data	26
Calculation and presentation of cost data	29
6 Estimating Effectiveness	31
Choosing an appropriate indicator	31
Precise definition of the indicator	34
Measuring the effectiveness indicator	39

Adapting or deriving estimates	48	3. Sample Work Sheet for Estimating Costs in Nutrition Projects	30
Estimating benefits	53	4. Anthropometric, Biological and Clinical Standards of Adequacy	36
Calculations	54	5. Indicators for Nutrition Project Appraisals	40
7 Analyzing the Results	57	6.A Data Linking Consumption, Nutrition, Health and Productivity to Improvements in Micronutrient Status	44
Criteria for deciding	57	6.B Data Linking Consumption, Nutrition, Health and Productivity to Improvements in Protein-Energy Malnutrition in Children	45
Dealing with uncertainty	59	6.C Data Linking Consumption, Nutrition, Health and Productivity to Interventions Targeted to Adults	46
Other considerations	62	7. Benefits Related to Outcomes of Nutritional Interventions	47
Case Studies		8. Factors Influencing the Impact of Interventions from Inputs to Consequences	49
1. Vitamin A: Choice of Delivery Strategy in Guatemala	65		
2. Prenatal Iron Supplementation in Jamaica: How to Increase Coverage	70		
3. Is Breastfeeding Promotion in Hospitals an Efficient Way to Improve Health Status?	76		
4. Food or Cash Transfers? A Case Study from Honduras	80		
5. Preventing Malnutrition in Children: How Worthwhile Is It?	84		
References	89		
Tables			
1. Economic Appraisal of Nutrition Projects	9		
2. Examples of Inputs and Activities for Some Nutrition Interventions	23
