

INDICE

Preface	xii
Part I Introduction to educational research	1
Chapter 1 Overview of research processes and products	2
The nature of educational research Purposeful ethical enterprise Systematic processes	3
Valid and reliable outcomes	4
Qualitative and quantitative inquiry modes Goals of research	5
Plans of attack Setting for projects	7
Intended uses of results Roles of researchers Reports of educational research	8
Primary and secondary reports	9
Sources	11
Chapter 2 Overview of research problems and methods	14
Goals of research and problems Explanation	15
Prediction Control	17
Importance of understanding research goals	19
Research methods	20
Descriptive methods	21
Experimental methods Qualitative methods	22
Historical methods	23
Common elements in research plans	24
Part II Research problems, participants, and instrumentation	27
Chapter 3 Problem statements and literature review	28
Problems statements and goals of research revisited Explanation	29
Prediction Control	30
Literature reviews Purpose	31
Content	32
Introductory sections of research reports Description	36
Criteria for evaluation Applications of criteria	38
Introduction to the creation of research problems and literature reviews	41
Chapter 4 Participant procedures	42
Populations and samples Random samples	43
Simple random and stratified random samples Cluster and multistage samples	44

Nonrandom samples Systematic samples Quota Samples Systematic samples Purposeful samples	45
Convenience samples Procedures for quantitative studies Determination of sample sizes	47
Selection procedure	48
Assignment procedures	50
Procedure for qualitative studies Determination of sample sizes Selection procedures	52
Participant subsections of research reports Descriptions	54
Criteria for evaluation Applications of criteria	55
Chapter 5 Instrumentations procedures	59
Instrumentations for research projects	60
Procedures for quantitative studies Selection or development of strategies	61
Suitability of strategies for projects	62
Procedures for qualitative studies Development strategies	68
Suitability of strategies for projects	69
Instrumentations subsections in research report	70
Descriptions Criteria for evaluation	71
Applications of criteria	72
Parte III Methods and results for quantitative studies	77
Chapter 6 Design procedures for experimental research	78
Treatment procedure Major types of comparisons Other comparisons	79
Treatment administration Procedures for data collection and handling Systematic applications of procedures	81
Designs for true experiments Pretest and posttest control group design	82
Posttest only design Factorial designs	83
Designs for quasi-experiments	85
Designs for pre-experiments	86
Designs for complex experiments	88
Method sections in experimental research reports Descriptions Criteria for evaluation	89
Applications of criteria	90
Chapter 7 Design procedure for descriptive research	94

Procedures for data collection and handling Systematic application of procedures Design procedures for status studies Meta-analyses	95
Survey studies	97
Design procedures for causal comparative studies	98
Design procedures for correlation and prediction studies Correlation studies	100
Prediction studies	101
Methods sections in descriptive research reports Descriptions	102
Criteria for evaluation Applications of criteria	103
Chapter 8 Descriptive statistical data analyses and results	107
Procedures for group data analyses	108
Distributions and percentages Measures of central tendency and variation	109
Normal distribution	113
Standard scores Effect sizes	115
Procedures for analyzes of associations among data Correlation analyses	116
Regression analyses	119
Results sections of research report	121
Descriptions part 1 Criteria for evaluation	122
Applications of criteria	123
Chapter 9 Inferential statistical data analyses and results	126
Procedures for inferential statistical analyses Hypothesis testing strategies	127
Statement of hypotheses	128
Selection of inferential tests	131
Selection of significance levels	132
Applications of tests	134
Evaluation of test outcomes	135
Descriptions part 2 Criteria for evaluation	137
Applications of criteria	138
Parte IV Methods and results for qualitative studies	141
Chapter 10 Qualitative research procedures and results	142
Procedures for data collection and handling Circumstances	143
Preparation of data for analyses	145
Procedures for analyses and interpretations	146
Assignment of codes	147
Memos and diagrams	149
Computer software programs for analyses Result and interpretations	150
Procedures and results sections in qualitative research reports	151

Descriptions	
Criteria for evaluation	
Applications of criteria	152
Chapter 11 Historical research procedures and results	155
Procedures for data collection	
Location of data sources	156
Evaluation of data sources	158
Data collection techniques	159
Procedure for analyses and interpretations	
Development of a frame of reference	160
Data reduction	161
Construction of the narrative	162
Introduction and narrative sections in historical research report	
Descriptions	163
Criteria for evaluation	
Applications of criteria	164
Parte V Integration of research problems, methods, and outcomes	167
Chapter 12 discussions of results	168
Outcomes of research projects	
Interpretations of results in quantitative reports	169
Problem definition and literature review	
Design components	170
Conclusions	171
Recommendations	172
Discussions and conclusion sections of research reports	
Descriptions	
Criteria for evaluation	174
Applications of criteria	175
Abstract sections of research reports	177
Chapter 13 Creation of research problems and literature reviews	179
Initiation of a research project	
Sources of research problems	180
Brief literature survey	182
Preparation of an initial problem statement	
Selection criteria	183
Wording strategies	184
Execution of the literature search	
Databases for the search	186
Scope of the search	
Search strategies	190
Use of search results	192
Preparation of an initial draft of the literature review	
Selection of justification	193
Support of the justification	
Development of the references	194
Reconsideration and revision of the problem statement	195
Revision of the literature reviews and references list	
Content revision	196
Form revision	197

Chapter 14 Creation of proposal for research projects	199
Initiation of a research proposal Treatment procedures in experiments Definitions of levels	200
Assignments to participants Personnel costs	202
Data source procedures Participants sources Selection strategies	203
Nonparticipant sources Costs	204
Instrumentation, data collection, and handling procedures Strategies for numerical data	205
Strategies for verbal data	206
Circumstances for data collection Personnel and costs	207
Data analysis procedures Strategies for quantitative analyses Strategies for qualitative analyses Personnel and costs	209
Summary of the method section Time line	210
Budget Introduction to the project Introduction	211
Purpose of the study Education and significance Definitions Summary Title	212
Completion of the proposal Review board approval	213
Answer to selected exercises	217
Appendix A research reports	222
Appendix B data collection strategies	340
Appendix C Inferential statistical tests	348
References	356
Glossary	359
Name index	367
Subject index	368
