Preface to the Second Edition xiii
Preface to the First Edition xv

Part I Probability and Random Variables

1 The Meaning of Probability 3
1-1 Introduction 3
1-2 The Definitions 5
1-3 Probability and Induction 12
1-4 Causality versus Randomness 13

2 The Axioms of Probability 15
2-1 Set Theory 15
2-2 Probability Space 20
2-3 Conditional Probability 27
Problems 36

3 Repeated Trials 38
3-1 Combined Experiments 38
3-2 Bernoulli Trials 43
3-3 Asymptotic Theorems 47
3-4 Poisson Theorem and Random Points 55
Problems 60

4 The Concept of a Random Variable 63
4-1 Introduction 63
4-2 Distribution and Density Functions 66

4-3	Special Cases	73
4-4	Conditional Distributions and Total Probability	79
	Problems	84
5	**Functions of One Random Variable**	**86**
5-1	The Random Variable g(x)	86
5-2	The Distribution of g(x)	87
5-3	Mean and Variance	102
5-4	Moments	109
5-5	Characteristic Functions	115
	Problems	120
6	**Two Random Variables**	**124**
6-1	Bivariate Distributions	124
6-2	One Function of Two Random Variables	135
6-3	Two Functions of Two Random Variables	142
	Problems	148
7	**Moments and Conditional Distributions**	**151**
7-1	Joint Moments	151
7-2	Joint Characteristic Functions	157
7-3	Conditional Distributions	162
7-4	Conditional Expected Values	169
7-5	Mean Square Estimation	173
	Problems	179
8	**Sequences of Random Variables**	**182**
8-1	General Concepts	182
8-2	Conditional Densities, Characteristic Functions, and Normality	192
8-3	Mean Square Estimation	201
8-4	Stochastic Convergence and Limit Theorems	208
8-5	Random Numbers: Meaning and Generation	221
	Problems	237
9	**Statistics**	**241**
9-1	Introduction	241
9-2	Parameter Estimation	244
9-3	Hypothesis Testing	265
	Problems	279

Part II Stochastic Processes

10	**General Concepts**	**285**
10-1	Definitions	285
10-2	Systems with Stochastic Inputs	303

10-3	The Power Spectrum	319
10-4	Digital Processes	332
	Appendix 10A Continuity, Differentiation, Integration	336
	Appendix 10B Shift Operators and Stationary Processes	339
	Problems	340
11	**Basic Applications**	345
11-1	Random Walk, Brownian Motion, and Thermal Noise	345
11-2	Poisson Points and Shot Noise	354
11-3	Modulation	362
11-4	Cyclostationary Processes	373
11-5	Bandlimited Processes and Sampling Theory	376
11-6	Deterministic Signals in Noise	384
11-7	Bispectra and System Identification	389
	Appendix 11A The Poisson Sum Formula	395
	Appendix 11B Schwarz's Inequality	395
	Problems	396
12	**Spectral Representation**	401
12-1	Factorization and Innovations	401
12-2	Finite-Order Systems and State Variables	404
12-3	Fourier Series and Karhunen–Loève Expansions	412
12-4	Spectral Representation of Random Processes	416
	Problems	425
13	**Spectral Estimation**	427
13-1	Ergodicity	427
13-2	Spectral Estimation	443
13-3	Extrapolation and System Identification	455
	Appendix 13A Minimum-Phase Functions	474
	Appendix 13B All-Pass Functions	475
	Problems	477
14	**Mean Square Estimation**	480
14-1	Introduction	480
14-2	Prediction	487
14-3	Filtering and Prediction	508
14-4	Kalman Filters	515
	Problems	529
15	**Entropy**	533
15-1	Introduction	533
15-2	Basic Concepts	542
15-3	Random Variables and Stochastic Processes	558
15-4	The Maximum Entropy Method	569
15-5	Coding	579
15-6	Channel Capacity	591
	Problems	600

16 Selected Topics 603
16-1 The Level-Crossing Problem 603
16-2 Queueing Theory 612
16-3 Shot Noise 629
16-4 Markoff Processes 635
Problems 654

Bibliography 658
