

INDICE

1. Planet Earth	1
Major Concepts	2
Introduction	2
Earth Compared with the other Terrestrial planets	3
Earth's Outer Layers	10
Major features of the continents	14
Major features of the Oceanic lithosphere	18
2. The Hydrologic System	27
Major Concepts	28
Dynamics of the hydrologic system	28
Movement of water in hydrologic system	31
Effects of the hydrologic system	40
The hydrologic system and the environment	46
3. The Tectonic System	49
Major Concepts	50
The theory of plate tectonics	50
Gravity and isostasy	58
4. Minerals	55
Major Concepts	66
Matter	66
The nature of minerals	71
Growth and destruction of minerals	79
Silicate minerals	82
Rock – forming Minerals	83
5. Igneous Rocks	91
Major Concepts	92
Natures of magma	92
Importance of rock textures	94
Kinds of igneous rocks	97
Extrusive rock bodies	101
Intrusive rock Bodies	109
The origin and evolution of magma	114
6. Sedimentary Rocks	121
Major Concepts	122
Natures of sedimentary Rocks	122
Types of sedimentary Rocks	125
Sedimentary Rocks	133
Paleocurrents and Paleogeography	141
7. Metamorphic Rocks	145
Major Concepts	146
Nature and distribution of metamorphic Rocks	146
Metamorphic processes	149
Kinds of metamorphic Rocks	151
Metamorphic zones	154
Metamorphic Rocks and plate tectonics	157
8. Structure of Rock Bodies	161
Major Concepts	162

Evidence of cristal deformation	16
Dip and strike	164
Fonds	166
Faults	171
Joints	176
Causes of Rock Deformation	177
9. Geologic Time	181
Major Concepts	182
Discovery of time	182
Uncoconformities	184
Concepts of time	187
Early Estimates of the age of Earth	189
Relative Dating	190
Standard Geologic Column	195
Radiometric Measurements of Absolute Time	199
Radiometric time scale	203
Magnitude of Geologic Time	206
10. Wewthering	209
Major Concepts	210
Mechanical Wearthering	212
Cheminal Weathering	216
Geometry of Roch Disintegration	219
Weathering Characteristics of major Rock Types	222
Products of Weathering	225
Climate and Wethering	231
Rate of Weathering	233
11. Mass Movement	239
Majoe Concepts	240
Factors influencing mass movement	240
Types of Mass Movement	244
Slope Sytems	255
12. River Systems	259
Major Concepts	260
Geologic importante of running water	260
Major characteristics of river System	261
Dynamics of stream flow	263
Threshold velocity for sediment transport	267
Equilibrium in river Systems	268
Processes of stream erosion	271
Process of stream deposition	279
River Systems and plate tectonics	292
13. Evolution of Landforms	299
Major Concepts	300
Erosion and plate tectonics	300
Interruptions in landscape development	304
Differential erosion and estructure	305
14. Groundwater	323
Major Concepts	324

Porosity and permeability	324
The water table	325
Natural and artificial discharge	328
Artesian water	332
Thermal Springs and geysers	335
Erosion by groundwater	338
Deposition by groundwater	345
Alteration of groundwater Systems	351
15. Glacial Systems	359
Major concepts	360
Glacial Systems	360
Valley glacial Systems	369
Continental glacial Systems	374
Pleistocene glaciation	383
Records of pre – pleistocene glaciation	398
Causes of glaciation	399
16. Shoreline Systems	405
Major Concepts	406
Waves	406
Wave refraction	408
Longshore drift	410
Erosion along coasts	412
Evolution of shorelines	420
Reefs	426
Types of coasts	429
Tides	434
Tsunamis	435
17. Eolian Systems	439
Major Concepts	440
Wind as geologic agent	440
Wind erosion	442
Transportation of sediment by wind	445
Migration of sand dunes	447
Types of sand dunes	450
Loess	454
18. Plate Tectonics	459
Major Concepts	460
Continental drift	460
Development of the theory of plate tectonics	466
Plate geography	475
Plate boundaries	476
Plate motion	487
The driving mechanism	488
Mantle convection	489
Mantle plumes	492
19. Seismicity and Earth's Interior	497
Major Concepts	498
Characteristics of earthquakes	498

Earthquakes and plate tectonics	511
Seismic waves as probes of Earth's interior	515
20. Volcanic Systems	527
Major Concepts	528
Global patterns of volcanism	528
Volcanic Systems above mantle plumes	530
Volcanic Systems at divergent plate margins	541
Volcanic systems at convergent plate boundaries	548
Volcanic systems and society	555
21. Evolution of Oceans	563
Major Concepts	564
Sea – Floor Morphology	564
Composition and structure of the oceanic lithosphere	578
History of plate movement during the last 200 Million years	584
22. Evolution of Continents	589
Major Concepts	590
The continental crust	590
Orogenesis (Mountain Building)	599
Types of orogenic activity	606
Origin and evolution of Continents	613
23. Environment and Global Change	621
Major Concepts	622
Environmental geology	622
Resources	629
Energy	632
Limits to Growth and Consumption	639
24. Other Planets	643
Major Concepts	644
The terrestrial planets	644
Planetary bodies in the outer solar system	600
Origin of the solar system	670
Glossary	677
Index	699
