Contents

PREFACE ***xi***

1 FUNDAMENTAL CONCEPTS ***1***

1.1 Introduction 1

1.2 Historical Background 1

1.3 Outline of Presentation 2

1.4 Stresses and Equilibrium 2

1.5 Boundary Conditions 3

1.6 Strain-Displacement Relations 5

1.7 Stress-Strain Relations 6

1.8 Temperature Effects 8

1.9 Potential Energy and Equilibrium; The Rayleigh-Ritz Method 9

1.10 Galerkin's Method 13

1.11 Saint Venant's Principle 16

1.12 von Mises Stress 17

1.13 Computer Programs 18

1.14 Conclusion 18

Historical References 18

2 MATRIX ALGEBRA AND GAUSSIAN ELIMINATION 21

2.1 Matrix Algebra 21

2.2 Gaussian Elimination 28

2.3 Conjugate Gradient Method for Equation Solving 39

3 ONE-DIMENSIONAL PROBLEMS 46

3.1 Introduction 46

3.2 Finite Element Modeling 47

3.3 Coordinates and Shape Functions 49

3.4 The Potential Energy Approach 53

3.5 The Galerkin Approach 57

3.6 Assembly of the Global Stiffness Matrix and Load Vector 59

3.7 Properties of **K** 62

3.8 The Finite Element Equations; Treatment of Boundary Conditions 63

3.9 Quadratic Shape Functions 79

3.10 Temperature Effects 85

4 TRUSSES 100

4.1 Introduction 100

4.2 Plane Trusses 101

4.3 Three-Dimensional Trusses 112

4.4 Assembly of Global Stiffness Matrix for the Banded and Skyline Solutions 114

5 TWO-DIMENSIONAL PROBLEMS USING CONSTANT STRAIN TRIANGLES 132

5.1 Introduction 132

5.2 Finite Element Modeling 133

5.3 Constant Strain Triangle (CST) 135

5.4 Problem Modeling and Boundary Conditions 152

5.5 Orthotropic Materials 155

6 AXISYMMETRIC SOLIDS SUBJECTED TO AXISYMMETRIC LOADING 175

6.1 Introduction 175

6.2 Axisymmetric Formulation 175

6.3 Finite Element Modeling: Triangular Element 178

6.4 Problem Modeling and Boundary Conditions 189

7 TWO-DIMENSIONAL ISOPARAMETRIC ELEMENTS AND NUMERICAL INTEGRATION 209

7.1 Introduction 209

7.2 The Four-Node Quadrilateral 209

7.3 Numerical Integration 215

7.4 Higher-Order Elements 221

8 BEAMS AND FRAMES 238

8.1 Introduction 238

8.2 Finite Element Formulation 242

8.3 Load Vector 246

8.4 Boundary Considerations 247

8.5 Shear Force and Bending Moment 247

8.6 Beams on Elastic Supports 249

8.7 Plane Frames 251

8.8 Three-Dimensional Frames 256

8.9 Some Comments 260

9 THREE-DIMENSIONAL PROBLEMS IN STRESS ANALYSIS 279

9.1 Introduction 279

9.2 Finite Element Formulation 280

9.3 Stress Calculations 285

9.4 Mesh Preparation 286

9.5 Hexahedral Elements and Higher-Order Elements 288

9.6 Problem Modeling 290

9.7 Frontal Method for Finite Element Matrices 292

10 SCALAR FIELD PROBLEMS 310

10.1 Introduction 310

10.2 Steady-State Heat Transfer 312

10.3 Torsion 342

10.4 Potential Flow, Seepage, Electric and Magnetic Fields, Fluid Flow in Ducts 349

10.5 Conclusion 356

11 DYNAMIC CONSIDERATIONS 371

11.1 Introduction 371

11.2 Formulation 371

11.3 Element Mass Matrices 375

11.4 Evaluation of Eigenvalues and Eigenvectors 381

11.5 Interfacing with Previous Finite Element Programs and a Program for Determining Critical Speeds of Shafts 392

11.6 Guyan Reduction 393

11.7 Conclusion 396

12 PREPROCESSING AND POSTPROCESSING 412

12.1 Introduction 412

12.2 Mesh Generation 413

12.3 Postprocessing 421

12.4 Conclusion 426

APPENDIX 451

BIBLIOGRAPHY 454

INDEX 459
