Contents

1 *Introduction* 1

1.1 **Engineering and Mechanics** 2

1.2 **Learning Mechanics** 2

Problem Solving 3 / Calculators and Computers 3 / Engineering Applications 3

1.3 **Fundamental Concepts** 4

Space and Time 4 / Newton's Laws 4 / Newtonian Gravitation 5 / Numbers 6

1.4 **Units** 7

International System of Units 7 / U.S. Customary Units 8 / Angular Units 8 / Conversion of Units 9

2 *Vectors* 15

Vector Operations and Definitions 16

2.1 **Scalars and Vectors** 16

2.2 **Rules for Manipulating Vectors** 16

Vector Addition 16 / Product of a Scalar and a Vector 18 / Vector Subtraction 19 / Unit Vectors 19 / Vector Components 19

Cartesian Components 24

2.3 **Components in Two Dimensions** 24

Manipulating Vectors in Terms of Components 24 / Position Vectors in Terms of Components 25

2.4 **Components in Three Dimensions** 38

Magnitude of a Vector in Terms of Components 39 / Direction Cosines 40 / Position Vectors in Terms of Components 41 / Components of a Vector Parallel to a Given Line 41

Products of Vectors 52

2.5 **Dot Products** 52

Definition 52 / Dot Products in Terms of Components 53 / Vector Components Parallel and Normal to a Line 54

2.6 **Cross Products** 61

Definition 61 / Cross Products in Terms of Components 62 / Evaluating a 3 x 3 Determinant 64

2.7 **Mixed Triple Products** 65

Chapter Summary 72

Review Problems 74

3 *Forces* 77

3.1 **Types of Forces** 78

Gravitational Forces 79 / Contact Forces 79

3.2 **Equilibrium and Free-Body Diagrams** 84

3.3 **Two-Dimensional Force Systems** 87

APPLICATION TO ENGINEERING: STEADY FLIGHT 92

3.4 **Three-Dimensional Force Systems** 103

COMPUTATIONAL MECHANICS 110

Chapter Summary 115

Review Problems 117

4 *Systems of Forces and Moments* 121

4.1 **Two-Dimensional Description of the Moment** 122

4.2 **The Moment Vector** 134

Magnitude of the Moment 134 / Sense of the Moment 134 / Relation to the Two-Dimensional Description 137 / Varignon's Theorem 138

4.3 **Moment of a Force About a Line** 148

Definition 149 / Applying the Definition 150 / Special Cases 152

4.4 **Couples** 160

4.5 **Equivalent Systems** 171

4.6 **Representing Systems by Equivalent Systems** 176

Representing a System by a Force and a Couple 176 / Representing a System by a Wrench 182

COMPUTATIONAL MECHANICS 196

Chapter Summary 198

Review Problems 200

5 *Objects in Equilibrium* 205

5.1 **The Equilibrium Equations** 206

5.2 **Two-Dimensional Applications** 207

Supports 207 / Free-Body Diagrams 211 / The Scalar Equilibrium Equations 212

5.3 **Statically Indeterminate Objects** 219

Redundant Supports 219 / Improper Supports 222

APPLICATION TO ENGINEERING: DESIGN FOR HUMAN FACTORS 224

5.4 **Three-Dimensional Applications** 237

Supports 237 / The Scalar Equilibrium Equations 241

5.5 **Two-Force and Three-Force Members** 255

Two-Force Members 255 / Three-Force Members 256

COMPUTATIONAL MECHANICS 264

Chapter Summary 267

Review Problems 268

6 *Structures in Equilibrium* 273

6.1 **Trusses** 274

6.2 **The Method of Joints** 276

APPLICATION TO ENGINEERING: BRIDGE DESIGN 282

6.3 **The Method of Sections** 289

6.4 **Space Trusses** 295

6.5 **Frames and Machines** 299

Analyzing the Entire Structure 300 / Analyzing the Members 300

COMPUTATIONAL MECHANICS 326

Chapter Summary 329

Review Problems 330

7 *Centroids and Centers of Mass* 333

7.1 **Centroids** 334

Introduction 334 / Areas 335 / Volumes 339 / Lines 339 / Centers of Mass 343

7.2 **Composites** 353

Areas 353 / Volumes and Lines 354 / Centers of Mass 355

APPLICATION TO ENGINEERING: CENTERS OF MASS OF VEHICLES 364

7.3 **The Pappus-Guldinus Theorems** 374

First Theorem 374 / Second Theorem 374

Chapter Summary 379

Review Problems 380

8 *Moments of Inertia* 385

Areas 386

8.1 **Definitions** 386

8.2 **Parallel-Axis Theorems** 393

APPLICATION TO ENGINEERING: BEAM DESIGN 400

8.3 **Rotated and Principal Axes** 407

Rotated Axes 407 / Principal Axes 409 / Mohr's Circle 413

Masses 419

8.4 **Simple Objects** 419

Slender Bars 419 / Thin Plates 420

8.5 **Parallel-Axis Theorem** 424

Chapter Summary 434

Review Problems 435

9 *Distributed Forces* 439

9.1 **Loads Distributed Along a Line** 440

9.2 **Internal Forces and Moments in Beams** 448

9.3 **Shear Force and Bending Moment Diagrams** 456

9.4 **Relations Between Distributed Load, Shear Force, and Bending Moment** 463

9.5 **Distributed Loads on Cables** 471

Loads Distributed Uniformly Along a Horizontal Line 471 / Loads Distributed Uniformly Along the Cable 475

9.6 **Discrete Loads on Cables** 480

COMPUTATIONAL MECHANICS 484

9.7 **Pressure** 487

Definitions of the Pressure and Center of Pressure 487 / Pressure Distribution in a Stationary Liquid 489

Chapter Summary 498

Review Problems 500

10 *Friction* 503

10.1 **Theory of Dry Friction** 504

Coefficients of Friction 505 / Angles of Friction 507

10.2 **Applications** 520

Wedges 520 / Threads 523 / Journal Bearings 531 / Thrust Bearings and Clutches 533 / Belt Friction 540

APPLICATION TO ENGINEERING: BELTS AND PULLEYS 543

COMPUTATIONAL MECHANICS 548

Chapter Summary 551

Review Problems 553

11 *Virtual Work and Potential Energy* 557

11.1 **Virtual Work** 558

Work 558 / Principle of Virtual Work 559 / Application to Structures 561

11.2 **Potential Energy** 571

Examples of Conservative Forces 571 / Principle of Virtual Work for Conservative Forces 573 / Stability of Equilibrium 573

COMPUTATIONAL MECHANICS 582

Chapter Summary 584

Review Problems 585

Appendices

A **Review of Mathematics** 587

B **Properties of Areas and Lines** 590

C **Properties of Volumes and Homogeneous Objects** 592

Answers to Even-Numbered Problems 594

Index 604
