Contents

CHAPTER 1 1

Magnetic Systems

1.1 Magnetic Field Concepts 2
1.2 Equivalent Magnetic and Electric Circuits 5
1.3 Energy in a Magnetic Field 8
1.4 Ferromagnetism 9
1.5 Magnetization 12
1.6 Hysteresis 17
1.7 Hysteresis Loss 23
1.8 Eddy Current Loss 25
1.9 Core Losses 29
1.10 Alternating Excitation 31
1.11 Production of Magnetic Flux in Air Gap 34
1.12 Modeling of Magnetic Systems 40

CHAPTER 2 51

Transformers

2.1 Ideal Transformers 51
2.1.1 Transformation of Electric Circuit Elements 54
2.2 Equivalent Circuit of a Transformer 56
2.2.1 Winding Resistances 56
2.2.2 Magnetizing Inductance 56
2.2.3 Core Losses 58
2.2.4 Leakage Inductance 59
2.3 Transformer Rating 65
2.3.1 Per Unit Values 66
2.4 Measurement of Transformer Parameters 69
2.5 Transformer Performance 71

CHAPTER 3 83

Basic Principles of Electric Machines

3.1 Forces on Electric Currents 84
3.2 Forces on Ferromagnetic Material 86
3.3 Elementary Rotating Machine 88
3.4 Placing Conductors in Slots 93
3.5 Some Elementary Types of Electric Machines 95
3.6 Ferromagnetic Actuator 107
3.7 Reluctance Machines 113

CHAPTER 4 135

Commutator Machines

4.1 Magnetic System 135
4.2 Rotor Windings and Commutator 138
4.3 Torque and Generated Voltage 140
4.4 Equivalent Circuit 144
4.5 Steady-State Performance 148
4.6 Motors Operating on Constant Voltage Supply 154
4.7 Operation as a Generator 160

CHAPTER 5 171

Induction Machines

5.1 Sinusoidally Distributed Windings 172
5.2 Rotating Magnetic Field 177
5.3 Flux Linkage and Magnetizing Inductance 181
5.4 Torque Production with Squirrel Cage Rotor 185
5.5 Equivalent Circuit Near Synchronous Speed 190
5.6 Machines with Multiple Pole Pairs 193
5.7 Leakage Inductance and Maximum Torque 196
5.8 Rotor Design for Starting Torque 204
5.9 Single-Phase Induction Motors 206

CHAPTER 6 213

Synchronous Machines

6.1 Cylindrical Wound-Field Machines 214
6.2 Steady-State Equivalent Circuit 216

6.3 Steady-State Operation 217
6.4 Starting and Excitation of Synchronous Machines 225
6.5 Measurement of Parameters 226
6.6 Permanent Magnet Synchronous Machines 229
6.7 Electrically Switched Permanent Magnet Motors 233

CHAPTER 7 **241**

Magnetic Systems and Transformers—Revisited

7.1 Analysis of Complex Magnetic Systems 241
7.1.1 Equivalent Circuits 242
7.1.2 Equivalent Circuit for a Two-Winding Shell-Type Transformer 250
7.1.3 Synthesis of Magnetic Devices 252
7.1.4 Determination of Leakage Inductance from Dimensions 252
7.2 Design of Inductors and Transformers 255
7.2.1 Heat Transfer 256
7.2.2 Inductor Design 258
7.2.3 Transformer Design 261
7.3 Design of Permanent-Magnet Devices 264
7.4 Variable Frequency Operation of Transformers 268
7.5 Transient Inrush Current of a Transformer 272
7.6 Transformers for Polyphase Systems 274
7.6.1 Connections of Transformers for Three-Phase Systems 274
7.6.2 Polyphase Transformers 279
7.7 Some Special Transformation Devices 282
7.7.1 Autotransformers 282
7.7.2 Instrument Transformers 285
7.8 Forces in Saturable Magnetic Devices 286

CHAPTER 8 **307**

Power Semiconductor Converters

8.1 Power Switching Devices 308
8.2 Controlled Rectifier Systems 310
8.2.1 Single-Phase Controlled Rectifier 311
8.2.2 Three-Phase Controlled Rectifier 317
8.3 Choppers 322
8.3.1 Step-Down Choppers 323
8.3.2 Step-Up Choppers 327
8.3.3 Two- and Four-Quadrant Choppers 329

8.4 Inverters 331
8.4.1 A Simple Voltage-Source Inverter 332
8.4.2 Pulse-Width-Modulated Voltage-Source Inverters 336
8.4.3 Current-Source Inverters 338
8.5 Cycloconverters 342

CHAPTER 9 **347**

Commutator Motor Drives

9.1 Mechanical System Modeling 349
9.2 Dynamic Relations for Drive Systems 354
9.3 Closed-Loop Speed Control 360
9.4 Position Control 365
9.5 Chopper Drives 367
9.6 Controlled Rectifier Drives 372
9.7 Series Commutator Motors 376
9.8 Armature Reaction and Commutation 379

CHAPTER 10 **393**

Induction Motor Drives

10.1 A Transient Model of the Induction Machine 394
10.1.1 An Alternate Form of Transient Model 402
10.1.2 Instantaneous Power and Torque Relations 404
10.1.3 Steady-State Analysis 409
10.1.4 Modeling of Saturation Effects 412
10.1.5 Modeling of Deep Rotor Bar Effects 415
10.2 Variable-Voltage, Variable-Frequency Operation 416
10.2.1 Fundamental-Frequency Performance 416
10.2.2 Effects of Voltage Harmonics 422
10.2.3 Closed-Loop Speed Control 426
10.3 Variable-Current, Variable-Frequency Operation 426
10.4 Variable-Voltage, Constant-Frequency Operation 432
10.5 Speed Control by Rotor-Power Recovery 435
10.6 Unbalanced Operation 438
10.6.1 Operation with One Phase Open 443
10.7 Practical Windings and Space Harmonics 445
10.8 Linear Induction Motors 449

CHAPTER 11 463

Synchronous Generators, Motors, and Drives

11.1 Modeling of Synchronous Machines 464
11.1.1 Cylindrical-Rotor Machines 464
11.1.2 Representation of Magnetic Saturation 472
11.1.3 Modeling of Saliency 473
11.1.4 Measurement of Parameters 485
11.2 Electrical Transient Performance 487
11.3 Electromechanical Transient Performance 496
11.4 Permanent-Magnet Synchronous Motors 503
11.4.1 Machines with Surface-Mounted Magnets 503
11.4.2 Machines with Inset Magnets 508
11.4.3 Machines with Circumferential Magnets 510
11.4.4 Hysteresis Motors 511
11.5 Variable-Frequency Synchronous Motor Drives 512
11.5.1 Open-Loop Drive Systems 513
11.5.2 Self-Controlled Drive Systems 516
11.6 Switched Reluctance Motor Drives 520
11.7 Stepper Motor Drives 524

Appendixes

A SI Unit Equivalents 539
B Physical Constants 541
C Resistivity and Temperature Coefficient of Resistivity of Some Conductive Materials 542
D Wire Table 543

Answers to Problems 545
