<b>List of Symbols</b>	<b>xx</b>
<b>0 Preliminary Comments</b>	<b>1</b>
Note to the students	3
References	6
<b>1 Review of Electromagnetic Theory</b>	<b>8</b>
1.1    Introduction	8
1.2    Maxwell's Equations	9
1.3    Wave Equation for Free Space	10
1.4    Algebraic Form of Maxwell's Equations	11
1.5    Waves in Dielectrics	12
1.6    The Uncertainty Relationships	13
1.7    Spreading of an Electromagnetic Beam	15

1.8	Wave Propagation in Anisotropic Media	16
1.9	Elementary Boundary Value Problems in Optics	20
	1.9.1 Snell's Law, 20	
	1.9.2 Brewster's Angle, 21	
1.10	Coherent Electromagnetic Radiation	23
1.11	Example of Coherence Effects	28
	Problems	31
	References and Suggested Readings	34
<b>2</b>	<b>Ray Tracing in an Optical System</b>	<b>35</b>
2.1	Introduction	35
2.2	Ray Matrix	35
2.3	Some Common Ray Matrices	37
2.4	Applications of Ray Tracing: Optical Cavities	39
2.5	Stability: Stability Diagram	42
2.6	The Unstable Region	44
2.7	Example of Ray Tracing in a Stable Cavity	44
2.8	Repetitive Ray Paths	47
2.9	Initial Conditions: Stable Cavities	48
2.10	Initial Conditions: Unstable Cavities	49
2.11	Astigmatism	50
2.12	Continuous Lens-Like Media	51
	2.12.1 Propagation of a Ray in an Inhomogeneous Medium, 53	
	2.12.2 Ray Matrix for a Continuous Lens, 54	
2.13	Wave Transformation by a Lens	56
	Problems	57
	References and Suggested Readings	62
<b>3</b>	<b>Gaussian Beams</b>	<b>63</b>
3.1	Introduction	63
3.2	Preliminary Ideas: TEM Waves	63
3.3	Lowest-Order $\text{TEM}_{0,0}$ Mode	66

3.4	Physical Description of TEM <sub>0,0</sub> Mode	70
3.4.1	<i>Amplitude of the Field,</i>	70
3.4.2	<i>Longitudinal Phase Factor,</i>	71
3.4.3	<i>Radial Phase Factor,</i>	72
3.5	Higher-Order Modes	73
3.6	ABCD law for Gaussian beams	76
3.7	Divergence of the Higher-Order Modes: Spatial Coherence	79
	Problems	80
	References and Suggested Readings	84
<b>4</b>	<b>Guided Optical Beams</b>	<b>86</b>
4.1	Introduction	86
4.2	Optical Fibers and Heterostructures: A Slab Waveguide Model	87
4.2.1	<i>Zig-Zag Analysis,</i>	87
4.2.2	<i>Numerical Aperture,</i>	89
4.3	Modes in a Step-Index Fiber (or a Heterojunction Laser): Wave Equation Approach	90
4.3.1	<i>TE Mode (<math>E_z = 0</math>),</i>	92
4.3.2	<i>TM Modes (<math>H_z = 0</math>),</i>	94
4.3.3	<i>Graphic Solution for the Propagation Constant: "R" and "V" Parameters,</i>	95
4.4	Gaussian Beams in Graded Index (GRIN) Fibers and Lenses	96
4.5	Perturbation Theory	102
4.6	Dispersion and Loss in Fibers: Data	105
4.7	Pulse Propagation in Dispersive Media: Theory	109
4.8	Optical Solitons	116
	Problems	122
	References and Suggested Readings	127
<b>5</b>	<b>Optical Cavities</b>	<b>130</b>
5.1	Introduction	130
5.2	Gaussian Beams in Simple Stable Resonators	130
5.3	Application of the ABCD Law to Cavities	133
5.4	Mode Volume in Stable Resonators	137

Problems	139
References and Suggested Readings	142
<b>6 Resonant Optical Cavities</b>	<b>144</b>
6.1 General Cavity Concepts	144
6.2 Resonance	144
6.3 Sharpness of Resonance: Q and Finesse	148
6.4 Photon Lifetime	151
6.5 Resonance of the Hermite-Gaussian Modes	154
6.6 Diffraction Losses	156
6.7 Cavity With Gain: An Example	157
Problems	159
References and Suggested Readings	170
<b>7 Atomic Radiation</b>	<b>172</b>
7.1 Introduction and Preliminary Ideas	172
7.2 Blackbody Radiation Theory	173
7.3 Einstein's Approach: A and B Coefficients	179
7.3.1 <i>Definition of Radiative Processes</i> , 179	
7.3.2 <i>Relationship Between the Coefficients</i> , 181	
7.4 Line Shape	183
7.5 Amplification by an Atomic System	187
7.6 Broadening of Spectral Lines	191
7.6.1 <i>Homogeneous broadening mechanisms</i> , 191	
7.6.2 <i>Inhomogeneous Broadening</i> , 196	
7.6.3 <i>General Comments on the Line Shape</i> , 200	
7.7 Review	200
Problems	201
References and Suggested Readings	205
<b>8 Laser Oscillation and Amplification</b>	<b>207</b>
8.1 Introduction: Threshold Condition for Oscillation	207

8.2	Laser Oscillation and Amplification in a Homogeneous Broadened Transition	208
8.3	Gain Saturation in a Homogeneous Broadened Transition	212
8.4	Laser Oscillation in an Inhomogeneous System	223
8.5	Multimode Oscillation	229
8.6	Gain Saturation in Doppler-Broadened Transition: Mathematical Treatment	230
8.7	Amplified Spontaneous Emission (ASE)	234
8.8	Laser Oscillation: A Different Viewpoint	238
	Problems	242
	References and Suggested Readings	258
<b>9</b>	<b>General Characteristics of Lasers</b>	<b>260</b>
9.0	Introduction	260
9.1	Limiting Efficiency	260
	<i>9.1.1 Factors in the efficiency,</i> 260	
	<i>9.1.2 Two, 3, 4 : : ;, n level lasers,</i> 261	
9.2	CW Laser	263
	<i>9.2.1 Traveling Wave Ring Laser,</i> 264	
	<i>9.2.2 Optimum Coupling,</i> 267	
	<i>9.2.3 Standing Wave Lasers,</i> 269	
9.3	Laser Dynamics	274
	<i>9.3.1 Introduction and model,</i> 274	
	<i>9.3.2 Case a: A sub-threshold system,</i> 276	
	<i>9.3.3 Case b: A CW laser: threshold conditions,</i> 276	
	<i>9.3.4 Case c: A sinusoidal modulated pump,</i> 277	
	<i>9.3.5 Case d. A sudden “step” change in excitation rate,</i> 280	
	<i>9.3.6 Case e: Pulsed excitation → gain switching,</i> 282	
9.4	<i>Q</i> Switching, <i>Q</i> Spoiling, or Giant Pulse Lasers	284
9.5	Mode Locking	296
	<i>9.5.1 Preliminary considerations,</i> 296	
	<i>9.5.2 Mode locking in an inhomogeneous broadened laser,</i> 298	
	<i>9.5.3 Active mode locking,</i> 304	
9.6	Pulse Propagation in Saturable Amplifiers or Absorbers	311
9.7	Saturable Absorber (Colliding Pulse) Mode Locking	317

9.8	Additive-Pulse Mode Locking	322
	Problems	324
	References and Suggested Readings	344
<b>10</b>	<b>Laser Excitation</b>	<b>347</b>
10.1	Introduction	347
10.2	Three- and Four-Level Lasers	348
10.3	Ruby Lasers	351
10.4	Rare Earth Lasers and Amplifiers	358
	<i>10.4.1 General Considerations</i> , 358	
	<i>10.4.2 Nd:YAG lasers: Data</i> , 359	
	<i>10.4.3 Nd:YAG Pumped by a Semiconductor Laser</i> , 362	
	<i>10.4.4 Neodymium-Glass Lasers</i> , 369	
	<i>10.4.6 Erbium-Doped-Fiber-Amplifiers</i> , 371	
10.5	Broad-Band Optical Gain	376
	<i>10.5.1 Band-to-Band Emission and Absorption</i> , 376	
	<i>10.5.2 Theory of Band-to-Band Emission and Absorption</i> , 377	
10.6	Tunable Lasers	385
	<i>10.6.1 General Considerations</i> , 385	
	<i>10.6.2 Dye Lasers</i> , 386	
	<i>10.6.3 Tunable Solid State Lasers</i> , 391	
	<i>10.6.4 Cavities for Tunable Lasers</i> , 395	
10.7	Gaseous-Discharge Lasers	396
	<i>10.7.1 Overview</i> , 396	
	<i>10.7.2 Helium-Neon Laser</i> , 397	
	<i>10.7.3 Ion Lasers</i> , 403	
	<i>10.7.4 CO<sub>2</sub> Lasers</i> , 405	
10.8	Excimer Lasers: General Considerations	411
	<i>10.8.1 Formation of the Excimer State</i> , 412	
	<i>10.8.2 Excitation of the Rare Gas-Halogen Excimer Lasers</i> , 415	
10.9	Free Electron Laser	417
	Problems	423
	References and Suggested Readings	434
<b>11</b>	<b>Semiconductor Lasers</b>	<b>440</b>
11.1	Introduction	440

11.1.1	<i>Overview</i> , 440
11.1.2	<i>Populations in Semiconductor Laser</i> , 442
11.2	Review of Elementary Semiconductor Theory 444
11.2.1	<i>Density of States</i> , 445
11.3	Occupation Probability: Quasi-Fermi Levels 449
11.4	Optical Absorption and Gain in a Semiconductor 450
11.4.1	<i>Gain Coefficient in a Semiconductor</i> , 454
11.4.2	<i>Spontaneous Emission Profile</i> , 459
11.4.3	<i>An Example of an Inverted Semiconductor</i> , 460
11.5	Diode Laser 464
11.5.1	<i>Homojunction Laser</i> , 464
11.5.2	<i>Heterojunction Lasers</i> , 467
11.6	Quantum Size Effects 470
11.6.1	<i>Infinite Barriers</i> , 470
11.6.2	<i>Finite Barriers: An Example</i> , 476
11.7	Vertical Cavity Surface Emitting Lasers 482
11.8	Modulation of Semiconductor Lasers 486
11.8.1	<i>Static Characteristics</i> , 488
11.8.2	<i>Frequency Response of Diode Lasers</i> , 489
	Problems 492
	References and Suggested Readings 499

## 12 Advanced Topics in Laser Electromagnetics 502

12.1	Introduction 502
12.2	Semiconductor Cavities 503
12.2.1	<i>TE Modes (<math>E_z = 0</math>)</i> , 505
12.2.2	<i>TM Modes (<math>H_z = 0</math>)</i> , 507
12.2.3	<i>Polarization of TE and TM Modes</i> , 508
12.3	Gain Guiding: An Example 509
12.4	Optical Confinement and Effective Index 516
12.5	Distributed Feedback and Bragg Reflectors 517
12.5.1	<i>Introduction</i> , 517
12.5.2	<i>Coupled Mode Analysis</i> , 520
12.5.3	<i>Distributed Bragg Reflector</i> , 524
12.5.4	<i>A Quarter-Wave Bandpass Filter</i> , 525

12.5.5	<i>Distributed Feedback Lasers (Active Mirrors)</i> , 528
12.5.6	<i>Tunable Semiconductor Lasers</i> , 531
12.6	<b>Unstable Resonators</b> 534
12.6.1	<i>General Considerations</i> , 534
12.6.2	<i>Unstable Confocal Resonator</i> , 540
12.7	<b>Integral Equation Approach to Cavities</b> 543
12.7.1	<i>Mathematical Formulation</i> , 543
12.7.2	<i>Fox and Li Results</i> , 547
12.7.3	<i>Stable Confocal Resonator</i> , 550
12.8	<b>Field Analysis of Unstable Cavities</b> 555
12.9	<b>ABCD Law for “Tapered Mirror” Cavities</b> 562
12.10	<b>Laser Arrays</b> 568
12.10.1	<i>System Considerations</i> , 568
12.10.2	<i>Semiconductor Laser Array: Physical Picture</i> , 568
12.10.3	<i>Supermodes of the Array</i> , 570
12.10.4	<i>Radiation Pattern</i> , 574
	<b>Problems</b> 574
	<b>References and Suggested Readings</b> 585

**13 Maxwell’s Equations and the “Classical” Atom** **589**

13.1	<b>Introduction</b> 589
13.2	<b>Polarization Current</b> 590
13.3	<b>Wave Propagation With Active Atoms</b> 592
13.4	<b>The Classical <math>A_{21}</math> Coefficient</b> 596
13.5	<b>(Slater) Modes of a Laser</b> 597
13.5.1	<i>Slater Modes of a Lossless Cavity</i> , 598
13.5.2	<i>Lossy Cavity With a Source</i> , 600
13.6	<b>Dynamics of the Fields</b> 602
13.6.1	<i>Excitation Clamped to Zero</i> , 602
13.6.2	<i>Time Evolution of the Field</i> , 603
13.7	<b>Summary</b> 609
	<b>Problems</b> 610
	<b>References and Suggested Readings</b> 615

<b>14 Quantum Theory of the Field-Atom Interaction</b>	<b>616</b>
14.1 Introduction	616
14.2 Schrödinger Description	617
14.3 Derivation of the Einstein Coefficients	621
14.4 Dynamics of an Isolated Atom	624
14.5 Density Matrix Approach	627
<i>14.5.1 Introduction, 627</i>	
<i>14.5.2 Definition, 628</i>	
14.6 Equation of Motion for the Density Matrix	633
14.7 Two-Level System	635
14.8 Steady State Polarization Current	639
14.9 Multilevel or Multiphoton Phenomena	643
14.10 Raman Effects	651
<i>14.10.1 Phenomena, 651</i>	
<i>14.10.2 A Classical Analysis of the Raman Effect., 654</i>	
<i>14.10.3 Density Matrix Description of the Raman Effect, 660</i>	
14.11 Propagation of Pulses: Self-Induced Transparency	665
<i>14.11.1 Motivation for the Analysis, 665</i>	
<i>14.11.2 A Self-Consistent Analysis of the Field-Atom Interaction, 666</i>	
<i>14.11.3 "Area" Theorem, 670</i>	
<i>14.11.4 Pulse Solution, 673</i>	
Problems	676
References and Suggested Readings	679
<b>15 Spectroscopy of Common Lasers</b>	<b>681</b>
15.1 Introduction	681
15.2 Atomic Notation	681
<i>15.2.1 Energy Levels, 681</i>	
<i>15.2.2 Transitions: Selection Rules, 682</i>	
15.3 Molecular Structure: Diatomic Molecules	684
<i>15.3.1 Preliminary Comments, 684</i>	
<i>15.3.2 Rotational Structure and Transitions, 685</i>	
<i>15.3.3 Thermal Distribution of the Population in Rotational States, 686</i>	
<i>15.3.4 Vibrational Structure, 687</i>	

15.3.5	<i>Vibration-Rotational Transitions</i> , 688	
15.3.6	<i>Relative Gain on P and R Branches: Partial and Total Inversions</i> , 689	
15.4	<b>Electronic States in Molecules</b> 691	
15.4.1	<i>Notation</i> , 691	
15.4.2	<i>The Franck-Condon Principle</i> , 692	
15.4.3	<i>Molecular Nitrogen Lasers*</i> , 692	
	Problems 693	
	References and Suggested Readings 695	
<b>16</b>	<b>Detection of Optical Radiation</b>	<b>697</b>
16.1	Introduction 697
