PREFACE

xiii

Part 1 Signal and Image Processing

1

1 DIFFERENTIAL COMPETITIVE LEARNING FOR PHONEME RECOGNITION, *Seong-Gon Kong and Bart Kosko*

1

Adaptive Vector Quantization for Phoneme Recognition 1

Discrete Linear Time-Invariant Systems 4

Statistical Pattern Recognition 9

Similarity as Distance 9

Pattern Classification with Discriminant Functions 11

Minimum-Distance-to-Class-Means Classifier, 12

Quadratic Discriminant Functions, 13

v

Perceptrons	13
<i>Two-Class Perceptron Algorithm</i> ,	14
<i>Multiclass Perceptron Algorithm</i> ,	15
Bayesian Decision Theory	15
Vector Quantization	16
Stochastic Competitive-Learning Algorithms	18
<i>Competitive AVQ Algorithms</i> ,	19
<i>Unsupervised Competitive Learning (UCL)</i> ,	19
<i>Supervised Competitive Learning 1 (SCL1)</i> ,	20
<i>Supervised Competitive Learning 2 (SCL2)</i> ,	21
<i>Differential Competitive Learning</i> ,	21
<i>Differential Competitive Learning (DCL)</i> ,	23
Comparison of Competitive and Differential Competitive Learning for Centroid Estimation	25
Phoneme-Recognition Simulations	28
Conclusions	31
References	31
Problems	32
2 TEXTURE SEGMENTATION WITH NEURAL NETWORKS, <i>R. Chellappa, B. S. Manjunath, and T. Simchony</i>	37
Neural Texture Segmentation	37
Image Segmentation	38
Markov Random Fields and the Image Model	40
A Neural Network for Texture Classification	44
<i>Deterministic Relaxation</i> ,	45
Stochastic Algorithms for Texture Segmentation	45
<i>Searching for MAP Solutions</i> ,	45
<i>Maximizing the Posterior Marginal Distribution</i> ,	46
<i>Network Implementation of the Sampling Algorithms</i> ,	47
Stochastic Learning and Neural Networks	49
<i>Learning Algorithm</i> ,	51
Experimental Results and Conclusions	52
Conclusions	58

References	58	
Problems	60	
3	IMAGE RESTORATION WITH NEURAL NETWORKS,	
	<i>Y. T. Zhou and R. Chellappa</i>	63
Introduction	63	
An Image-Degradation Model	65	
Image Representation	68	
Estimation of Model Parameters	69	
Restoration	72	
A Practical Algorithm	73	
Computer Simulations	75	
Choosing Boundary Values	77	
Comparison of Restoration Methods	79	
	<i>Inverse Filter and SVD Pseudoinverse Filter, 82</i>	
	<i>MMSE and Modified MMSE Filters, 82</i>	
Conclusion	84	
References	85	
Problems	86	
4	IDENTIFICATION OF MOVING-AVERAGE SYSTEMS USING	
	HIGHER-ORDER STATISTICS AND LEARNING,	
	<i>Jerry M. Mendel and Li-Xing Wang</i>	91
Neural Networks and Higher-Order Statistics	91	
Cumulants	92	
Cumulant-Polyspectra Formulas for Linear Systems	94	
Moving-Average Systems	95	
Determining MA Coefficients Using Cumulants	97	
Problem Statement	101	
Neural-Network Architecture	101	
Training Algorithm	107	

Extensions to Input Statistic Estimation and Order Determination	109
Simulations	111
Conclusions	116
References	117
Problems	119
5 OBJECT RECOGNITION WITH GABOR FUNCTIONS IN THE DYNAMIC LINK ARCHITECTURE—PARALLEL IMPLEMENTATION ON A TRANSPUTER NETWORK, <i>Joachim Buhmann, Jörg Lange, Christoph von der Malsburg, Jan C. Vorbrüggen, and Rolf P. Würtz</i>	121
Object Recognition in the Dynamic Link Architecture	121
<i>The Problem of Invariant Pattern Recognition, 122</i>	
Invariant Object Recognition in the Dynamic Link Architecture	123
Specific Implementation	129
<i>Image Coding, 129</i>	
<i>Object Domain, 135</i>	
<i>Object Recognition by Graph Matching, 136</i>	
<i>Object-Recognition Performance, 142</i>	
<i>Parallel Implementation on a Transputer Network, 143</i>	
<i>Network Topology and Routing Software, 145</i>	
<i>Performance Figures, 147</i>	
Discussion	149
References	153
Problems	156
Part 2 Robotics and Control	161
6 ROBOTICS AND NEURAL NETWORKS, <i>George A. Bekey</i>	161
The Need for Neural-Network Model-Free Estimation in Robotics	161
Robotics Problems	162
<i>Inverse Kinematics, 162</i>	

Review of Prior Work, 163
Inverse Dynamics, 164

Context-Sensitive Networks 165

Architecture and Properties of Context Networks, 166
Context-Sensitive Architecture for Learning Inverse Models, 166
Simulation of a 2-DOF Planar Arm, 168
Simulation of 3-DOF PUMA Kinematics, 170
Inverse Jacobian Control, 172

The Inverse-Dynamics Problem 173

The Simplified Equations, 173
Review of Prior Work, 174

Decomposition Methods 178

Functional Decomposition of Dynamic Equations, 178
Combined Feedforward/Feedback Controllers, 180

Conclusion 183

References 184

Problems 185

7 SUPERVISED LEARNING WITH GAUSSIAN POTENTIALS, *Sukhan Lee*

189

Mapping Neural Networks 189

Potential-Function Network 195

Design Concept, 195

Gaussian Potential-Function Network 199

Learning 202

Parameter Learning, 202
Hierarchically Self-Organizing Learning, 203
Learning Algorithm, 205

Recall Process by Inverse Mapping 207

Inverse Mapping Based on Lyapunov Function, 207
Input-Pattern Update, 209
Jumping Control, 212

Simulation 213

Conclusion 219
