
CONTENTS

Preface	xix
1 Overview of Optical Fiber Communications	1
1.1 Basic Network Information Rates	3
1.2 The Evolution of Fiber Optic Systems	6
1.3 Elements of an Optical Fiber Transmission Link	8
1.4 Simulation and Modeling Tools	15
1.4.1 Characteristics of Simulation and Modeling Tools 1.4.2 Programming Languages 1.4.3 The PTDS [®] Simulation and Modeling Tool	
1.5 Use and Extension of the Book	20
1.5.1 Reference Material 1.5.2 Simulation Program on a CD-ROM 1.5.3 Photonics Laboratory 1.5.4 Web-Based Resources	
References	21
2 Optical Fibers: Structures, Waveguiding, and Fabrication	25
2.1 The Nature of Light	26
2.1.1 Linear Polarization 2.1.2 Elliptical and Circular Polarization 2.1.3 The Quantum Nature of Light	
2.2 Basic Optical Laws and Definitions	32
2.3 Optical Fiber Modes and Configurations	35
2.3.1 Fiber Types 2.3.2 Rays and Modes 2.3.3 Step-Index Fiber Structure 2.3.4 Ray Optics Representation 2.3.5 Wave Representation in a Dielectric Slab Waveguide	
2.4 Mode Theory for Circular Waveguides	43
2.4.1 Overview of Modes* 2.4.2 Summary of Key Modal Concepts 2.4.3 Maxwell's Equations 2.4.4 Waveguide Equations 2.4.5 Wave Equations	

	<i>for Step-Index Fibers 2.4.6 Modal Equation 2.4.7 Modes in Step-Index Fibers 2.4.8 Linearly Polarized Modes 2.4.9 Power Flow in Step-Index Fibers</i>	
2.5	Single-Mode Fibers	62
	<i>2.5.1 Mode-Field Diameter 2.5.2 Propagation Modes in Single-Mode Fibers</i>	
2.6	Graded-Index Fiber Structure	65
2.7	Fiber Materials	67
	<i>2.7.1 Glass Fibers 2.7.2 Halide Glass Fibers 2.7.3 Active Glass Fibers 2.7.4 Chalcogenide Glass Fibers 2.7.5 Plastic Optical Fibers</i>	
2.8	Fiber Fabrication	70
	<i>2.8.1 Outside Vapor-Phase Oxidation 2.8.2 Vapor-Phase Axial Deposition 2.8.3 Modified Chemical Vapor Deposition 2.8.4 Plasma-Activated Chemical Vapor Deposition 2.8.5 Double-Crucible Method</i>	
2.9	Mechanical Properties of Fibers	76
2.10	Fiber Optic Cables	80
	Problems	82
	References	86
3	Signal Degradation in Optical Fibers	91
3.1	Attenuation	92
	<i>3.1.1 Attenuation Units 3.1.2 Absorption 3.1.3 Scattering Losses 3.1.4 Bending Losses 3.1.5 Core and Cladding Losses</i>	
3.2	Signal Distortion in Optical Waveguides	103
	<i>3.2.1 Information Capacity Determination 3.2.2 Group Delay 3.2.3 Material Dispersion 3.2.4 Waveguide Dispersion 3.2.5 Signal Distortion in Single-Mode Fibers 3.2.6 Polarization-Mode Dispersion 3.2.7 Intermodal Distortion</i>	
3.3	Pulse Broadening in Graded-Index Waveguides	115
3.4	Mode Coupling	121
3.5	Design Optimization of Single-Mode Fibers	122
	<i>3.5.1 Refractive-Index Profiles 3.5.2 Cutoff Wavelength 3.5.3 Dispersion Calculations 3.5.4 Mode-Field Diameter 3.5.5 Bending Loss</i>	
	Problems	133
	References	137
4	Optical Sources	141
4.1	Topics from Semiconductor Physics	142
	<i>4.1.1 Energy Bands 4.1.2 Intrinsic and Extrinsic Material 4.1.3 The pn Junctions 4.1.4 Direct and Indirect Band Gaps 4.1.5 Semiconductor Device Fabrication</i>	
4.2	Light-Emitting Diodes (LEDs)	150
	<i>4.2.1 LED Structures 4.2.2 Light Source Materials 4.2.3 Quantum Efficiency and LED Power 4.2.4 Modulation of an LED</i>	

4.3	Laser Diodes	161
	<i>4.3.1 Laser Diode Modes and Threshold Conditions / 4.3.2 Laser Diode Rate Equations / 4.3.3 External Quantum Efficiency / 4.3.4 Resonant Frequencies / 4.3.5 Laser Diode Structures and Radiation Patterns / 4.3.6 Single-Mode Lasers / 4.3.7 Modulation of Laser Diodes / 4.3.8 Temperature Effects</i>	
4.4	Light Source Linearity	185
4.5	Modal, Partition, and Reflection Noise	188
4.6	Reliability Considerations	190
	Problems	193
	References	199
5	Power Launching and Coupling	204
5.1	Source-to-Fiber Power Launching	205
	<i>5.1.1 Source Output Pattern / 5.1.2 Power-Coupling Calculation / 5.1.3 Power Launching versus Wavelength / 5.1.4 Equilibrium Numerical Aperture</i>	
5.2	Lensing Schemes for Coupling Improvement	212
	<i>5.2.1 Nonimaging Microsphere / 5.2.2 Laser Diode-to-Fiber Coupling</i>	
5.3	Fiber-to-Fiber Joints	215
	<i>5.3.1 Mechanical Misalignment / 5.3.2 Fiber-Related Losses / 5.3.3 Fiber End-Face Preparation</i>	
5.4	LED Coupling to Single-Mode Fibers	226
5.5	Fiber Splicing	228
	<i>5.5.1 Splicing Techniques / 5.5.2 Splicing Single-Mode Fibers</i>	
5.6	Optical Fiber Connectors	231
	<i>5.6.1 Connector Types / 5.6.2 Single-Mode Fiber Connectors / 5.6.3 Connector Return Loss</i>	
	Problems	236
	References	238
6	Photodetectors	243
6.1	Physical Principles of Photodiodes	244
	<i>6.1.1 The pin Photodetector / 6.1.2 Avalanche Photodiodes</i>	
6.2	Photodetector Noise	252
	<i>6.2.1 Noise Sources / 6.2.2 Signal-to-Noise Ratio</i>	
6.3	Detector Response Time	257
	<i>6.3.1 Depletion Layer Photocurrent / 6.3.2 Response Time</i>	
6.4	Avalanche Multiplication Noise	262
6.5	Structures for InGaAs APDs	264
6.6	Temperature Effect on Avalanche Gain	266
6.7	Comparisons of Photodetectors	267
	Problems	268
	References	271

7	Optical Receiver Operation	274
7.1	Fundamental Receiver Operation	275
	7.1.1 <i>Digital Signal Transmission</i> 7.1.2 <i>Error Sources</i> 7.1.3 <i>Receiver Configuration</i> 7.1.4 <i>Fourier Transform Representation</i>	
7.2	Digital Receiver Performance	281
	7.2.1 <i>Probability of Error</i> 7.2.2 <i>The Quantum Limit</i>	
7.3	Detailed Performance Calculations	289
	7.3.1 <i>Receiver Noises</i> 7.3.2 <i>Shot Noise</i> 7.3.3 <i>Receiver Sensitivity Calculation</i> 7.3.4 <i>Performance Curves</i> 7.3.5 <i>Nonzero Extinction Ratio</i>	
7.4	Preamplifier Types	305
	7.4.1 <i>High-Impedance FET Amplifiers</i> 7.4.2 <i>High-Impedance Bipolar Transistor Amplifiers</i> 7.4.3 <i>Transimpedance Amplifier</i> 7.4.4 <i>High-Speed Circuits</i>	
7.5	Analog Receivers	312
	Problems	315
	References	318
8	Digital Transmission Systems	321
8.1	Point-to-Point Links	322
	8.1.1 <i>System Considerations</i> 8.1.2 <i>Link Power Budget</i> 8.1.3 <i>Rise-Time Budget</i> 8.1.4 <i>First-Window Transmission Distance</i> 8.1.5 <i>Transmission Distance for Single-Mode Links</i>	
8.2	Line Coding	335
	8.2.1 <i>NRZ Codes</i> 8.2.2 <i>RZ Codes</i> 8.2.3 <i>Block Codes</i>	
8.3	Error Correction	339
8.4	Noise Effects on System Performance	340
	8.4.1 <i>Modal Noise</i> 8.4.2 <i>Mode-Partition Noise</i> 8.4.3 <i>Chirping</i> 8.4.4 <i>Reflection Noise</i>	
	Problems	351
	References	354
9	Analog Systems	358
9.1	Overview of Analog Links	359
9.2	Carrier-to-Noise Ratio	360
	9.2.1 <i>Carrier Power</i> 9.2.2 <i>Photodetector and Preamplifier Noises</i> 9.2.3 <i>Relative Intensity Noise (RIN)</i> 9.2.4 <i>Reflection Effects on RIN</i> 9.2.5 <i>Limiting Conditions</i>	
9.3	Multichannel Transmission Techniques	367
	9.3.1 <i>Multichannel Amplitude Modulation</i> 9.3.2 <i>Multichannel Frequency Modulation</i> 9.3.3 <i>Subcarrier Multiplexing</i>	
	Problems	374
	References	377

10 WDM Concepts and Components	379
10.1 Operational Principles of WDM	380
10.2 Passive Components	383
<i>10.2.1 The 2 × 2 Fiber Coupler</i> / <i>10.2.2 Scattering Matrix Representation</i> /	
<i>10.2.3 The 2 × 2 Waveguide Coupler</i> / <i>10.2.4 Star Couplers</i> / <i>10.2.5 Mach-</i>	
<i>Zehnder Interferometer Multiplexers</i> / <i>10.2.6 Fiber Grating Filters</i> / <i>10.2.7</i>	
<i>Phase-Array-Based WDM Devices</i>	
10.3 Tunable Sources	405
10.4 Tunable Filters	408
<i>10.4.1 System Considerations</i> / <i>10.4.2 Tunable Filter Types</i>	
Problems	414
References	419
11 Optical Amplifiers	423
11.1 Basic Applications and Types of Optical Amplifiers	424
<i>11.1.1 General Applications</i> / <i>11.1.2 Amplifier Types</i>	
11.2 Semiconductor Optical Amplifiers	426
<i>11.2.1 External Pumping</i> / <i>11.2.2 Amplifier Gain</i>	
11.3 Erbium-Doped Fiber Amplifiers	430
<i>11.3.1 Amplification Mechanism</i> / <i>11.3.2 EDFA Architecture</i> / <i>11.3.3 EDFA</i>	
<i>Power-Conversion Efficiency and Gain</i>	
11.4 Amplifier Noise	437
11.5 System Applications	441
<i>11.5.1 Power Amplifiers</i> / <i>11.5.2 In-Line Amplifiers</i> / <i>11.5.3 Preamplifiers</i> /	
<i>11.5.4 Multichannel Operation</i> / <i>11.5.5 In-Line Amplifier Gain Control</i>	
11.6 Wavelength Converters	447
<i>11.6.1 Optical-Gating Wavelength Converters</i> / <i>11.6.2 Wave-Mixing</i>	
<i>Wavelength Converters</i>	
Problems	449
References	454
12 Optical Networks	457
12.1 Basic Networks	458
<i>12.1.1 Network Topologies</i> / <i>12.1.2 Performance of Passive Linear Buses</i> /	
<i>12.1.3 Performance of Star Architectures</i>	
12.2 SONET/SDH	467
<i>12.2.1 Transmission Formats and Speeds</i> / <i>12.2.2 Optical Interfaces</i> / <i>12.2.3</i>	
<i>SONET/SDH Rings</i> / <i>12.2.4 SONET/SDH Networks</i>	
12.3 Broadcast-and-Select WDM Networks	477
<i>12.3.1 Broadcast-and-Select Single-Hop Networks</i> / <i>12.3.2 Broadcast-and-</i>	
<i>Select Multihop Networks</i> / <i>12.3.3 The ShuffleNet Multihop Network</i>	

12.4	Wavelength-Routed Networks	482
	<i>12.4.1 Optical Cross-Connects 12.4.2 Performance Evaluation of Wavelength Conversion</i>	
12.5	Nonlinear Effects on Network Performance	488
	<i>12.5.1 Effective Length and Area 12.5.2 Stimulated Raman Scattering 12.5.3 Stimulated Brillouin Scattering 12.5.4 Self-Phase Modulation and Cross-Phase Modulation 12.5.5 Four-Wave Mixing 12.5.6 Dispersion Management</i>	
12.6	Performance of WDM + EDFA Systems	502
	<i>12.6.1 Link Bandwidth 12.6.2 Optical Power Requirements for a Specific BER 12.6.3 Crosstalk</i>	
12.7	Solitons	505
	<i>12.7.1 Soliton Pulses 12.7.2 Soliton Parameters 12.7.3 Soliton Width and Spacing</i>	
12.8	Optical CDMA	514
12.9	Ultrahigh Capacity Networks	516
	<i>12.9.1 Ultrahigh Capacity WDM Systems 12.9.2 Bit-Interleaved Optical TDM 12.9.3 Time-Slotted Optical TDM</i>	
	Problems	519
	References	526
13	Measurements	533
13.1	Measurement Standards and Test Procedures	535
13.2	Test Equipment	536
	<i>13.2.1 Optical Power Meters 13.2.2 Optical Attenuators 13.2.3 Tunable Laser Sources 13.2.4 Optical Spectrum Analyzers 13.2.5 Optical Time-Domain Reflectometer (OTDR) 13.2.6 Multifunction Optical Test Systems</i>	
13.3	Attenuation Measurements	541
	<i>13.3.1 The Cutback Technique 13.3.2 Insertion-Loss Method</i>	
13.4	Dispersion Measurements	544
	<i>13.4.1 Intermodal Dispersion 13.4.2 Time-Domain Intermodal Dispersion Measurements 13.4.3 Frequency-Domain Intermodal Dispersion Measurements 13.4.4 Chromatic Dispersion 13.4.5 Polarization-Mode Dispersion</i>	
13.5	OTDR Field Applications	550
	<i>13.5.1 OTDR Trace 13.5.2 Attenuation Measurements 13.5.3 Fiber Fault Location</i>	
13.6	Eye Patterns	554
13.7	Optical Spectrum Analyzer Applications	558
	<i>13.7.1 Characterization of Optical Sources 13.7.2 EDFA Gain and Noise-Figure Testing</i>	
	Problems	563
	References	566

Appendixes

A International System of Units	569
B Useful Mathematical Relations	570
C Bessel Functions	574
D Decibels	577
E Topics from Communication Theory	579
F Factors Contributing to Dispersion	582
Index	585
