CONTENTS

PREFACE ix

CHAPTER 1. INTRODUCTION

1.1 Why study random vibration? 1
1.2 Probabilistic modeling and terminology 2
1.3 Approach to the study of failure probability 6
Exercises 6

CHAPTER 2. ANALYSIS OF STOCHASTIC PROCESSES

2.1 Concept of a stochastic process 9
2.2 Probability distribution 11
2.3 Moment and covariance functions 12
2.4 Stationarity of stochastic processes 19
2.5 Properties of autocorrelation and autocovariance 24
2.6 Limits of stochastic processes 30
2.7 Ergodicity of a stochastic process 33
2.8 Stochastic derivative 38
2.9 Stochastic integral 47
Exercises 52

CHAPTER 3. TIME DOMAIN LINEAR VIBRATION ANALYSIS

3.1 Deterministic dynamics 59
3.2 Evaluation of impulse response functions 61
3.3 Stochastic dynamics 67
3.4 Response to stationary excitation 70
3.5 Delta-correlated excitations 73
3.6 Response of linear single-degree-of-freedom oscillator 77
3.7 Stationary SDF response to delta-correlated excitation 86
3.8 Nearly delta-correlated processes 90
Exercises 91

CHAPTER 4. FREQUENCY DOMAIN ANALYSIS

4.1 Frequency content of a stochastic process 97
4.2 Spectral density functions 99
4.3 Properties of spectral density functions 102
4.4 Narrowband processes 104
4.5 Broadband processes and white noise 107
4.6 Linear dynamics and harmonic transfer functions 110
4.7 Response of linear SDF oscillator 115
4.8 Measures of bandwidth 119
4.9 Amplitude and phase of a stochastic process 125
4.10 Calculating autospectral density from a sample 133
Exercises 136

CHAPTER 5. GAUSSIAN AND NON-GAUSSIAN STOCHASTIC PROCESSES

5.1 Importance of the Gaussian distribution 141
5.2 Gaussian processes and linear dynamics 142
5.3 Amplitude and phase of a Gaussian process 145
5.4 Approximations for non-Gaussian processes 153
5.5 Higher-order spectral density functions 166
5.6 Average frequency of a non-Gaussian process 168
Exercises 172

CHAPTER 6. OCCURRENCE RATES AND DISTRIBUTIONS OF EXTREMES

6.1 Categories of problems 175
6.2 Rate of occurrence of upcrossings 175
6.3 Rate of occurrence of peaks and valleys 183
6.4 Probability distribution of peaks 185
6.5 Extreme value distribution and Poisson approximation 192
6.6 Improved estimates of the extreme value distribution 198
6.7 Inclusion-exclusion series for extreme value distribution 206
6.8 Extreme value of Gaussian response of SDF oscillator 208
Exercises 210

CHAPTER 7. LINEAR SYSTEMS WITH MULTIPLE INPUTS AND OUTPUTS

7.1 Generalization of scalar formulation 217
7.2 Multi-degree of freedom systems 220
7.3 Uncoupled modes of MDF systems 222
7.4 Time domain stochastic analysis of uncoupled MDF systems 227
7.5 Frequency domain analysis of MDF systems 235
7.6 State-space formulation of equations of motion 240
Exercises 251

CHAPTER 8 STATE-SPACE ANALYSIS

8.1 Basic concept 257
8.2 Derivation of state-space moment and cumulant equations 259
8.3 Equations for first and second moments and covariance 261
8.4 Simplifications for delta-correlated excitation 266
8.5 Energy balance and covariance 279
8.6 Higher moments and cumulants using Kronecker notation 284
8.7 State-space equations for stationary autocovariance 292
8.8 Fokker-Planck equation 295
Exercises 309

CHAPTER 9. INTRODUCTION TO NONLINEAR STOCHASTIC VIBRATION

9.1 Approaches to the problem 313
9.2 Fokker-Planck equation 316
9.3 Statistical linearization 326
9.4 Linearization of dynamics problems 330
9.5 Linearization of hysteretic systems 342
9.6 State-space moment and cumulant equations 357
Exercises 369

CHAPTER 10. STOCHASTIC ANALYSIS OF FATIGUE DAMAGE

10.1 Fundamentals of structural fatigue 377
10.2 Modeling accumulated damage 382
10.3 Stochastic analysis of fatigue 387
10.4 Rayleigh approximation 391
10.5 Other spectral methods 395
10.6 Non-Gaussian effects 403
Exercises 408

APPENDIX A. ANALYSIS OF RANDOM VARIABLES

A.1 Probability distribution 413
A.2 Probability density functions 417
A.3 Joint and marginal distributions of random variables 420
A.4 Probability distribution of a function of a random variable 426
A.5 Conditional probability distributions 428
A.6 Independence of random variables 436
A.7 Expected values 439
A.8 Moments of random variables 444
A.9 Conditional expectation 451
A.10 Generalized conditional expectation 454
A.11 Characteristic function of a random variable 457
A.12 Power series for characteristic function 460
A.13 Importance of moment analysis 463
Exercises 463

APPENDIX B. GAUSSIAN RANDOM VARIABLES

B.1 Gaussian distribution 471
B.2 Jointly Gaussian random variables 475
B.3 Conditional distribution of Gaussian random variables 482
Exercises 485

APPENDIX D. FOURIER ANALYSIS

APPENDIX C. DIRAC DELTA FUNCTIONS 487

APPENDIX D. FOURIER ANALYSIS 489
