

Preface	xiii
<b>1 Introduction to Automatic Controls</b>	<b>1</b>
1.1 Historical Development	1
1.2 Feedback Control Systems	3
1.3 System Representation	5
1.4 Modern Control Systems	7
<b>2 Representation of Control Components</b>	<b>12</b>
2.1 Operational Notation	13
2.2 Mechanical Components	16
2.3 Electrical Components	22
2.4 Series and Parallel Laws	23
2.5 Analogies	31
2.6 Scale Factors	34
2.7 Thermal Systems	38
2.8 Fluid Systems	40
<b>3 Representation of Control Systems</b>	<b>55</b>
3.1 Linearization of Nonlinear Functions	55
3.2 Linearization of Operating Curves	66
3.3 Hydraulic Systems	70
3.4 Pneumatic Systems	79
3.5 DC Motors	85
3.6 AC Motors	91
3.7 Block-Diagram Algebra	92
3.8 Speed Control Systems	95
3.9 Generalized Feedback Control System	103
<b>4 Steady-State Operation</b>	<b>123</b>
4.1 Steady-State Analysis	123
4.2 Equilibrium	131

4.3	Proportional Control Systems	134
4.4	Integral Control Systems	139
4.5	Proportional Plus Integral Control Systems	141
4.6	Modes of Control	144
4.7	Summary	147
<b>5</b>	<b>Laplace Transforms</b>	<b>162</b>
5.1	Classical Methods	163
5.2	Laplace Transform Method	167
5.3	Transform Properties	173
5.4	Initial Conditions	185
5.5	General Procedures	192
5.6	Piecewise Continuous Functions	198
5.7	Convolution Integral	200
5.8	Error Coefficients	204
<b>6</b>	<b>Transient Reponse</b>	<b>216</b>
6.1	Inverse Transformations	218
6.2	Complex Conjugate Zeros	221
6.3	Damping Ratio and Natural Frequency	227
6.4	Computer Solution	233
6.5	Transient Response Specifications	243
6.6	General Form of Transient Response	250
6.7	Response to an External Disturbance	252
6.8	Routh's Stability Criterion	257
6.9	Summary	262
<b>7</b>	<b>The Root-Locus Method</b>	<b>279</b>
7.1	Significance of Root Loci	279
7.2	Construction of Loci	285
7.3	General Procedure	295
7.4	Newton's Method and the Remainder Theorem	307
7.5	Loci Equations	310
7.6	Variation of Parameters	312
7.7	Computer Solution	318
7.8	Sensitivity	319
<b>8</b>	<b>Analog Computers</b>	<b>337</b>
8.1	Computer Operations	338
8.2	Direct Programming	342
8.3	Time Scale	353
8.4	Simulation	358
<b>9</b>	<b>State-Space Methods</b>	<b>377</b>
9.1	System Representation	377
9.2	Signal Flow Graphs	391
9.3	Solution of State-Space Equations	398
9.4	Methods of Computing $\Phi(t)$	401
9.5	Forced Response	411

9.6	Transfer Functions	416
9.7	Multivariable Systems	421
<b>10</b>	<b>Digital Control Systems</b>	<b>439</b>
10.1	Sampled-Data Systems	440
10.2	The $z$ Transform	441
10.3	Inverse $z$ Transforms	450
10.4	Block-Diagram Algebra	458
10.5	Transient Response	461
10.6	Filters	470
10.7	Discrete Data Systems	476
10.8	Sampled-Data Control Systems	479
10.9	Computer-Controlled Systems	486
<b>11</b>	<b>Frequency-Response Methods</b>	<b>502</b>
11.1	Frequency Response	502
11.2	Logarithmic Representation	508
11.3	Evaluating the Gain $K$	518
11.4	Equivalent Unity-Feedback Systems	520
11.5	Polar Plots	521
11.6	$M$ and $\alpha$ Circles	524
11.7	Correlation between Transient and Frequency Response	528
11.8	Determining the Gain $K$ to Yield a Desired $M_p$	537
<b>12</b>	<b>System Compensation</b>	<b>553</b>
12.1	Nyquist Stability Criterion	553
12.2	Gain Margin and Phase Margin	562
12.3	Lead Compensation	568
12.4	Lag Compensation	575
12.5	Lag-Lead Compensation	580
12.6	Internal Feedback	582
12.7	Inverse Polar Plots	583
12.8	Stability Criteria in the Inverse Plane	590
<b>Appendix A</b>	<b>Equilibrium Flow</b>	<b>601</b>
<b>Appendix B</b>	<b>Fourier Series, Fourier Integral, and the Laplace Transform</b>	<b>606</b>
	B.1 Fourier Series	606
	B.2 Fourier Integral	609
	B.3 Laplace Transform	610
	<b>Index</b>	<b>613</b>
