

INDICE

Parte 1 Getting Started	1
1 Jump start-for those who are in a hurry!	3
2 To the instructor and student	4
3 About this text	
3.1. Conventions used in this txt	6
3.2 Organization	
4 Hardware and software	7
4.1 Hardware and software requirements	
4.2 Software installation	
4.2.1 MS-DOS personal computers (PCs)	8
4.2.2 Macintosh computers	
4.3 Hardcopy Output	9
4.3.1 MS-DOS PCs	
4.3.2 Macintosh Computers	10
5 About the CSAD toolbox	
5.1 Initializing the CSDA toolbox	11
5.2 Assumptions	
5.2.1 Matlab familiarity	
5.2.2 Control systems familiarity	12
5.3 Restrictions	
5.3.1 Single-input, single-output systems	13
5.3.2 Numerical accuracy	
5.4 User Input	
5.4.1 Yes/No input	14
5.4.2 Single- number input	
5.4.3 Character string input	
5.4.4 Polynomial input	15
5.4.5 Vector input	
5.4.6 Matrix input	16
5.4.7 Graphical input	
5.5. Polynomial manipulation	17
Part 2 Theory and tools	19
6 Mathematical foundation	
6.1 Introduction	21
6.2 Complex variables and functions	
6.2.1 Complex variables	22
6.2.2 Functions of a complex variable	
6.2.3 Poles and zeros of a complex functions	23
6.3 Differential equations/state equations	
6.3.1 State equations	24
6.4 Transfer functions (SISO Systems)	26
6.4.1 Transfer functions with time delays	27
6.4.2 The characteristics equation	
6.5 Time responses with CSAD functions	28
6.5.1 Unit step response with the tftplot functions	29
6.5.2 Impulse response with the tftplot functions	30
6.5.3 Unit-ramp response with the tftplot functions	31

6.5.4 The <code>iltplot</code> functions	32
6.6 Partial-fraction expansion	34
6.7 Block diagrams and signal flow graphs	35
6.7.1 Manipulating block diagrams with <code>tfseries</code> , <code>tfparall</code> , and <code>tfclloop</code>	37
6.7.2 Feedback systems with constants feedback	
6.7.3 Multiple-loop systems	38
6.7.4 The state diagram	
Exercises	40
7 State-variable analysis	
7.1. Introduction	43
7.2 The state-variable formulation	44
7.3 The <code>svstuff</code> function	45
7.4 Characteristics equation and eigenvalues	
7.5 State transformations	46
7.5.1 Controllable canonical form (CCF)	47
7.5.2 Observable canonical form (CCF)	
7.5.3 Diagonal transformation	48
7.5.4 CCF, OCF, and DF transformations using <code>svstuff</code>	49
7.6 Relationships between state variables and transfer functions-decomposition	
7.6.1 Direct decomposition	52
7.6.2 Parallel decomposition	54
7.6.3 Cascade decomposition	55
7.6.4 Decomposition with <code>svstuff</code>	
7.6.5 Cascade decomposition and series connection of systems	57
7.6.6 Parallel connection of two systems	60
7.6.7 Feedback connections of two systems	61
7.6.8 Feedback systems with constant feedback	63
7.6.9 Multiple-loop systems	
7.7. Controllability and observability of linear time-invariant systems	64
7.8 Unit-step response	68
7.9 Impulse and ramp responses	73
Exercises	75
8 Time-domain analysis	
8.1. Introduction	78
8.2 Stability of linear SISO systems	79
8.3 Steady-state performance	81
8.3.1 The type of control systems	
8.3.2 The error constants	82
8.4 Transient response	
8.4.1 The unit-step response and time-domain specifications	84
8.5 First-and second-order systems	
8.5.1 First-order systems	86
8.5.2 Second-order systems	87
8.5.3 Analytical expressions for t_r and t_s	91
8.5.4 <code>tford2</code>	
8.5.5 Closed-loop systems simulation	92
8.6 Root-Locus diagram	
8.6.1 Properties of the root loci	93

Exercises	99
9 Frequency-domain analysis	
9.1 Introduction	102
9.2 Frequency-domain specification	103
9.3 Stability analysis in the frequency domain	
9.3.1 The nyquist criterion (minimum-phase systems)	108
9.3.2 The nyquist criterion (general case)	110
9.3.3 The bode plot	110
9.3.4 The magnitude-versus-phase plot	113
9.4 CSAD functions for frequency-domain analysis	
9.4.1 bplot	114
9.4.2 plrplot	118
9.4.3 mvplot	119
9.4.4 Using the fddesing function for frequency-domain analysis	120
Exercises	121
10 Design of control systems	
10.1 Introduction	123
10.2 The PID controller	124
10.3 Design with tddesign	126
10.3.1 The PD-controller design	127
10.3.2 The PI-controller design	129
10.4 Design of the PID controller in the frequency domain	133
10.4.1 Design of the PI controller	136
10.4.2 Design of the PD controller	139
10.4.3 Design of the PID controller	142
10.5 The lead-lag controller	144
10.5.1 Design of the phase-lead controller in the time domain	145
10.5.2 Design of the phase-lead controller in the frequency domain	147
10.5.3 Design of the phase-lead controller in the time domain	149
10.5.4 Design of the phase-lead controller in the frequency domain	152
10.6 State-feedback control: pole-placement design	154
10.6.1 State feedback with integral control	160
Exercises	162
Part 3 CSAD toolbox reference	165
INDEX	223
