

## Getting Started

<b>Starting MATLAB .....</b>	<b>2</b>
<b>Matrices and Magic Squares .....</b>	<b>3</b>
Entering Matrices .....	4
sum, transpose, and diag .....	5
Subscripts .....	7
The Colon Operator .....	8
The magic Function .....	9
<b>Expressions .....</b>	<b>11</b>
Variables .....	11
Numbers .....	11
Operators .....	12
Functions .....	12
Expressions .....	14
<b>Working with Matrices .....</b>	<b>15</b>
Generating Matrices .....	15
load .....	16
M-Files .....	16
Concatenation .....	17
Deleting Rows and Columns .....	17
<b>The Command Window .....</b>	<b>19</b>
The format Command .....	19
Suppressing Output .....	21
Long Command Lines .....	21
Command Line Editing .....	21
<b>Graphics .....</b>	<b>23</b>
Creating a Plot .....	23
Figure Windows .....	25

Adding Plots to an Existing Graph .....	25
Subplots .....	27
Imaginary and Complex Data .....	28
Controlling Axes .....	29
Axis Labels and Titles .....	30
Mesh and Surface Plots .....	31
Visualizing Functions of Two Variables .....	31
Images .....	32
Printing Graphics .....	33
<b>Help and Online Documentation</b> .....	34
The help Command .....	34
The Help Window .....	35
The lookfor Command .....	36
The Help Desk .....	37
The doc Command .....	37
Printing Online Reference Pages .....	37
Link to the MathWorks .....	37
<b>The MATLAB Environment</b> .....	38
The Workspace .....	38
save Commands .....	39
The Search Path .....	39
Disk File Manipulation .....	40
The diary Command .....	40
Running External Programs .....	41
<b>More About Matrices and Arrays</b> .....	42
Linear Algebra .....	42
Arrays .....	45
Multivariate Data .....	47
Scalar Expansion .....	48
Logical Subscripting .....	49
The find Function .....	50

<b>Flow Control</b>	52
if	52
switch and case	53
for	54
while	55
break	55
<b>Other Data Structures</b>	57
Multidimensional Arrays	57
Cell Arrays	59
Characters and Text	61
Structures	64
<b>Scripts and Functions</b>	67
Scripts	67
Functions	69
Global Variables	70
Command/Function Duality	71
The eval Function	71
Vectorization	72
Preallocation	72
Function Functions	73
<b>Handle Graphics</b>	76
Graphics Objects	76
Graphics Objects	76
Object Handles	77
Object Creation Functions	78
Object Properties	78
set and get	79
Graphics User Interfaces	81
Animations	81
Movies	83
<b>Learning More</b>	85

## Introduction

1

## MATLAB Working Environment

2

<b>Using the Environment</b> .....	<b>2-2</b>
<b>The Command Window</b> .....	<b>2-5</b>
<b>The Figure Window</b> .....	<b>2-18</b>
<b>Help and Online Documentation</b> .....	<b>2-20</b>
<b>Disk File Manipulation and Shell Escape</b> .....	<b>2-25</b>
<b>Data Import/Export</b> .....	<b>2-26</b>
<b>Memory Utilization</b> .....	<b>2-33</b>
<b>Microsoft Windows Handbook</b> .....	<b>2-35</b>
<b>UNIX Handbook</b> .....	<b>2-54</b>

## Debugger and Profiler

3

<b>MATLAB Debugger</b> .....	<b>3-2</b>
<b>M-File Profiler</b> .....	<b>3-17</b>

# Matrices and Linear Algebra

---

**4**

<b>Matrices and Linear Algebra</b> .....	<b>4-2</b>
<b>Matrices in MATLAB</b> .....	<b>4-4</b>
<b>Solving Linear Equations</b> .....	<b>4-13</b>
<b>Inverses and Determinants</b> .....	<b>4-20</b>
<b>LU, QR, and Cholesky Factorizations</b> .....	<b>4-24</b>
<b>Matrix Powers and Exponentials</b> .....	<b>4-31</b>
<b>Eigenvalues</b> .....	<b>4-34</b>
<b>Singular Value Decomposition</b> .....	<b>4-38</b>

# Polynomials and Interpolation

---

**5**

<b>Polynomials</b> .....	<b>5-2</b>
<b>Interpolation</b> .....	<b>5-9</b>

# Data Analysis and Statistics

---

**6**

<b>Column-Oriented Data Sets</b> .....	<b>6-3</b>
<b>Basic Data Analysis Functions</b> .....	<b>6-7</b>
<b>Data Pre-Processing</b> .....	<b>6-12</b>

<b>Regression and Curve Fitting</b> .....	<b>6-15</b>
<b>Case Study: Curve Fitting</b> .....	<b>6-20</b>
<b>Difference Equations and Filtering</b> .....	<b>6-29</b>
<b>Fourier Analysis and the Fast Fourier Transform (FFT)</b> .	<b>6-31</b>

## **Function Functions**

**7**

<b>Representing Functions in MATLAB</b> .....	<b>7-3</b>
<b>Plotting Mathematical Functions</b> .....	<b>7-4</b>
<b>Minimizing Functions and Finding Zeros</b> .....	<b>7-7</b>
<b>Numerical Integration (Quadrature)</b> .....	<b>7-14</b>

## **Ordinary Differential Equations**

**8**

<b>Quick Start</b> .....	<b>8-3</b>
<b>Representing Problems</b> .....	<b>8-5</b>
<b>ODE Solvers</b> .....	<b>8-10</b>
<b>Creating ODE Files</b> .....	<b>8-14</b>
<b>Improving Solver Performance</b> .....	<b>8-17</b>

<b>Examples: Applying the ODE Solvers</b>	8-34
---	------

<b>Questions and Answers</b>	8-48
------------------------------	------

## Sparse Matrices

**9**

<b>Introduction</b>	9-5
---------------------	-----

<b>Viewing Sparse Matrices</b>	9-11
--------------------------------	------

<b>Example: Adjacency Matrices and Graphs</b>	9-15
---	------

<b>Sparse Matrix Operations</b>	9-23
---------------------------------	------

## M-File Programming

**10**

<b>MATLAB Programming: A Quick Start</b>	10-2
--	------

<b>Scripts</b>	10-5
----------------	------

<b>Functions</b>	10-6
------------------	------

<b>Local and Global Variables</b>	10-16
-----------------------------------	-------

<b>Data Types</b>	10-19
-------------------	-------

<b>Operators</b>	10-21
------------------	-------

<b>Flow Control</b>	10-30
---------------------	-------

<b>Subfunctions</b>	10-38
---------------------	-------

<b>Indexing and Subscripting</b>	<b>10-40</b>
<b>String Evaluation</b>	<b>10-46</b>
<b>Command/Function Duality</b>	<b>10-48</b>
<b>Empty Matrices</b>	<b>10-49</b>
<b>Errors and Warnings</b>	<b>10-51</b>
<b>Times and Dates</b>	<b>10-54</b>
<b>Obtaining User Input</b>	<b>10-61</b>
<b>Shell Escape Functions</b>	<b>10-62</b>
<b>Optimizing the Performance of MATLAB Code</b>	<b>10-63</b>

## **Character Arrays (Strings)**

**11**

<b>Character Arrays</b>	<b>11-4</b>
<b>Cell Arrays of Strings</b>	<b>11-7</b>
<b>String Comparisons</b>	<b>11-9</b>
<b>Searching and Replacing</b>	<b>11-12</b>
<b>String/Numeric Conversion</b>	<b>11-13</b>

### 12

<b>Multidimensional Arrays</b> .....	12-3
<b>Computation with Multidimensional Arrays</b> .....	12-15
<b>Organizing Data in Multidimensional Arrays</b> .....	12-17
<b>Multidimensional Cell Arrays</b> .....	12-19
<b>Multidimensional Structure Arrays</b> .....	12-20

## Structures and Cell Arrays

---

### 13

<b>Structures</b> .....	13-3
<b>Cell Arrays</b> .....	13-18

## MATLAB Classes and Objects

---

### 14

<b>Classes and Objects: An Overview</b> .....	14-2
<b>Designing User Classes in MATLAB</b> .....	14-9
<b>Overloading Operators and Functions</b> .....	14-20
<b>Example: A Polynomial Class</b> .....	14-23
<b>Building on Other Classes</b> .....	14-34
<b>Example: Assets and Asset Subclasses</b> .....	14-37

<b>Example: The Portfolio Container</b>	14-54
<b>Saving and Loading Objects</b>	14-61
<b>Object Precedence</b>	14-66
<b>How MATLAB Determines Which Method to Call</b>	14-68

## File I/O

# 15

<b>Opening and Closing Files</b>	15-3
<b>Temporary Files and Directories</b>	15-6
<b>Binary Files</b>	15-7
<b>Controlling Position in a File</b>	15-10
<b>Formatted Files</b>	15-13

## Preface

<b>Typographic Conventions</b> .....	<b>3</b>
<b>Keyboard Conventions</b> .....	<b>3</b>
<b>How To Learn To Use the Notebook</b> .....	<b>4</b>

## Introduction

<b>Getting Started</b> .....	<b>1-2</b>
System Requirements .....	1-2
Microsoft Windows .....	1-2
Macintosh .....	1-2
Installing The Notebook .....	1-3
Learning to Use the Notebook .....	1-3

## Using the Notebook

<b>Notebook Documents</b> .....	<b>2-2</b>
About the M-Book Template .....	2-2
<b>Starting the Notebook</b> .....	<b>2-3</b>
Creating an M-Book .....	2-3
Editing an M-Book .....	2-4
Alternate Start-Up Method (Microsoft Windows) .....	2-5
Converting a Word Document to an M-Book .....	2-5

<b>Entering the M-Book Contents</b>	2-6
Entering Text	2-6
Defining MATLAB Commands	2-6
Defining and Evaluating MATLAB Commands	2-7
Entering Multiline MATLAB Commands	2-8
Entering Commands to Initialize the Workspace	2-8
Creating an Autoinit Cell	2-8
Evaluating an Autoinit Cell	2-8
Grouping MATLAB Commands	2-9
Creating a Cell Group	2-9
Evaluating a Cell Group	2-10
Embedding a MATLAB Command in Text	2-12
Using Calc Zones	2-12
Creating a Calc Zone	2-13
Evaluating a Calc Zone	2-13
Converting a Cell to Text	2-13
Bringing MATLAB Command Window to the Front	2-14
Protecting Your Workspace Integrity	2-14
Data Consistency	2-14
<b>Evaluating Cells</b>	2-15
Evaluating an Input Cell, Autoinit Cell, or Cell Group	2-15
Evaluating a Range of Input Cells	2-15
Evaluating the Entire M-Book	2-15
Controlling How Multiple Input Cells Are Evaluated	2-16
Evaluating a Calc Zone	2-16
Evaluating MATLAB Commands in a Loop	2-16
<b>Working with MATLAB Output</b>	2-18
Output Cells	2-18
How the Notebook Displays Output	2-18
Converting Output Cells to Text	2-18
Printing	2-19
Modifying Styles in the M-Book Template	2-19
For Microsoft Windows	2-20
For Macintosh	2-20
Controlling Numeric Output Format	2-21

Controlling Graphic Output .....	2-23
Embedding Graphic Output in the M-Book .....	2-23
Controlling Output on a Per-Input-Cell Basis .....	2-24
Sizing Graphic Output .....	2-24
Printing Graphic Output (Microsoft Windows Only) .....	2-25

## Notebook Commands

---

**3**

Overview .....	3-2
----------------	-----

## Glossary

---

**A**

## Introduction

1

<b>Introduction</b> .....	1-2
How to Use This Book .....	1-2
The Big Picture .....	1-3

<b>A Quick Start with Guide</b> .....	1-4
Modifying Properties with the Property Editor .....	1-4
Adding Buttons with the Control Panel .....	1-6
Setting Callbacks with the Callback Editor .....	1-7
Activating the Figure .....	1-8
The Bottom Line .....	1-9

## GUI Design

2

<b>Introduction</b> .....	2-2
<b>Design Principles</b> .....	2-3
Simplicity .....	2-4
Consistency .....	2-7
Familiarity .....	2-7
The Dynamic Interface .....	2-9
Keep It Simple .....	2-11
<b>Design Process</b> .....	2-12
A Complete Example: Precipitation Files .....	2-15

<b>Introduction</b> .....	3-2
<b>Handle Graphics and the Property Editor</b> .....	3-3
The Property Editor .....	3-3
<b>GUI Layout with Guide</b> .....	3-9
The Control Panel .....	3-10
The Property Editor .....	3-12
The Callback Editor .....	3-12
The Alignment Tool .....	3-14
The Menu Editor .....	3-15
A Complete Example .....	3-16
<b>Writing Callbacks</b> .....	3-25
Layout vs. Callbacks .....	3-25
Callback Tips .....	3-25
<b>A Complete Example: Temperature Conversion</b> .....	3-35

## Introducing the MATLAB API

<b>Introduction to MATLAB API</b> .....	<b>1-2</b>
MEX-Files .....	1-2
MAT-File Applications .....	1-2
Engine Applications .....	1-3
<b>MATLAB Data</b> .....	<b>1-4</b>
The MATLAB Array .....	1-4
Data Storage .....	1-4
Data Types in MATLAB .....	1-5
Complex Double-Precision Matrices .....	1-5
Numeric Matrices .....	1-5
MATLAB Strings .....	1-5
Sparse Matrices .....	1-5
Cell Arrays .....	1-6
Structures .....	1-6
Objects .....	1-6
Multidimensional Arrays .....	1-6
Logical Arrays .....	1-6
Empty Arrays .....	1-7
Using Data Types .....	1-7
The explore Example .....	1-7
<b>API Documentation</b> .....	<b>1-8</b>
The API Documentation Set .....	1-8
API Tutorial Files .....	1-8
How This Book Is Organized .....	1-9

<b>Introducing MEX-Files</b> .....	<b>2-2</b>
Using MEX-Files .....	2-2
The Distinction Between mx and mex Prefixes .....	2-3
mx Routines .....	2-3
mex Routines .....	2-3
<b>Building MEX-Files</b> .....	<b>2-4</b>
Testing Your Configuration .....	2-4
On UNIX .....	2-5
On Windows .....	2-6
On Macintosh .....	2-8
Special Considerations for Macintosh Users .....	2-9
Using -f to Specify an Options File .....	2-12
Preconfigured Options Files .....	2-13
<b>Troubleshooting Your Configuration</b> .....	<b>2-16</b>
Search Path Problem on Windows .....	2-16
MATLAB Pathnames Containing Spaces on Windows .....	2-16
DLLs Not on Path on Windows .....	2-16
Non-ANSI Compiler on UNIX .....	2-16
General Configuration Problem .....	2-16

## Creating C Language MEX-Files

<b>C MEX-Files</b> .....	<b>3-2</b>
Directory Organization .....	3-2
The Parts of a MEX-File .....	3-2
Required Arguments to a MEX-File .....	3-5
<b>Examples of C MEX-Files</b> .....	<b>3-7</b>
A First Example .....	3-7
Manipulating Strings .....	3-11
Passing Two or More Inputs or Outputs .....	3-14

Manipulating Structures and Cell Arrays .....	3-16
Handling Complex Data .....	3-20
Handling 8-, 16-, and 32-Bit Data .....	3-23
Manipulating Multidimensional Numerical Arrays .....	3-25
Handling Sparse Arrays .....	3-28
Calling MATLAB Functions and Other	
User-Defined Functions from Within a MEX-File .....	3-30
<b>Advanced Topics .....</b>	<b>3-33</b>
Help Files .....	3-33
Linking Multiple Files .....	3-33
Variable Scope .....	3-33
Memory Management .....	3-34
Automatic Cleanup of Temporary Arrays .....	3-34
Persistent Arrays .....	3-34
Hybrid Arrays .....	3-36
<b>How to Debug C Language MEX-Files .....</b>	<b>3-37</b>
Debugging on UNIX .....	3-37
Debugging on Windows .....	3-38
Debugging on Macintosh .....	3-39

## Creating Fortran MEX-Files

---

4

<b>Fortran MEX-Files .....</b>	<b>4-2</b>
Directory Organization .....	4-2
MEX-Files and Data Types .....	4-2
The Components of a Fortran MEX-File .....	4-2
The Pointer Concept .....	4-5
The Gateway Routine .....	4-6
The %val Construct .....	4-8
<b>Examples of Fortran MEX-Files .....</b>	<b>4-9</b>
A First Example — Passing a Scalar .....	4-9
Passing Strings .....	4-12
Passing Arrays of Strings .....	4-14

Passing Matrices .....	4-17
Passing Two or More Inputs or Outputs .....	4-19
Handling Complex Data .....	4-22
Dynamic Allocation of Memory .....	4-26
Handling Sparse Matrices .....	4-28
Calling MATLAB Functions from Fortran MEX-Files .....	4-32
<b>Advanced Topics .....</b>	<b>4-36</b>
Help Files .....	4-36
Linking Multiple Files .....	4-36
Variable Scope .....	4-36
Memory Management .....	4-37
<b>How to Debug Fortran Language MEX-Files .....</b>	<b>4-38</b>
Debugging on UNIX .....	4-38
Debugging on Windows .....	4-39
Debugging on Macintosh .....	4-40

## Data Export and Import

# 5

<b>Using MAT-Files .....</b>	<b>5-2</b>
Importing Data to MATLAB .....	5-2
Exporting Data from MATLAB .....	5-3
Exchanging Data Files Between Platforms .....	5-4
Reading and Writing MAT-Files .....	5-4
MAT-File Interface Library .....	5-5
Directory Organization .....	5-7
Windows .....	5-8
UNIX .....	5-8
Macintosh .....	5-9
Example Files .....	5-9
<b>Examples of MAT-Files .....</b>	<b>5-11</b>
Creating a MAT-File .....	5-11
C Example .....	5-11
Fortran Example .....	5-15

Reading a MAT-File .....	5-20
C Example .....	5-20
Fortran Example .....	5-25
<b>Compiling and Linking MAT-File Programs .....</b>	<b>5-29</b>
Special Considerations .....	5-29
Floating-Point Exceptions .....	5-29
UNIX .....	5-30
Setting Runtime Library Path .....	5-30
Compiling and Linking Commands .....	5-31
Special Consideration for Fortran (f77) on HP-UX 10.x .....	5-32
Windows .....	5-32
Macintosh .....	5-33
General Macintosh Information .....	5-33
Metrowerks C on the Power Macintosh .....	5-33
MPW C on the Power Macintosh .....	5-34
Metrowerks C on 68K Macintosh .....	5-35
MPW C on 68K Macintosh .....	5-35
Language Systems Fortran on the Power Macintosh .....	5-36
Language Systems Fortran on 68K Macintosh .....	5-37
Absoft Fortran on the Power Macintosh .....	5-38

## Using the MATLAB Engine

**6**

<b>Interprocess Communication: The MATLAB Engine .....</b>	<b>6-2</b>
The Engine Library .....	6-3
Communicating with MATLAB .....	6-4
<b>Examples .....</b>	<b>6-5</b>
Calling the MATLAB Engine .....	6-5
C Example .....	6-5
Fortran Example .....	6-10
<b>Compiling and Linking Engine Programs .....</b>	<b>6-14</b>
Special Considerations .....	6-14
Floating-Point Exceptions .....	6-14

UNIX .....	6-16
Setting Runtime Library Path .....	6-16
Compiling and Linking Commands .....	6-16
Special Consideration for Fortran (f77) on HP-UX 10.x .....	6-17
Windows .....	6-18

## Client/Server Applications

**7**

<b>MATLAB ActiveX Integration .....</b>	<b>7-2</b>
What Is ActiveX? .....	7-2
ActiveX Concepts and Terminology .....	7-2
MATLAB ActiveX Support Overview .....	7-3
MATLAB ActiveX Client Support .....	7-4
Using ActiveX Objects .....	7-4
ActiveX Client Reference .....	7-5
Writing Event Handlers .....	7-17
Additional ActiveX Client Information .....	7-18
Releasing Interfaces .....	7-18
Using ActiveX Collections .....	7-18
Data Conversions .....	7-19
Using MATLAB As a DCOM Server Client .....	7-20
MATLAB ActiveX Control Container Limitations .....	7-21
MATLAB Sample Control .....	7-21
MATLAB ActiveX Automation Server Support .....	7-21
MATLAB ActiveX Automation Methods .....	7-22
Additional ActiveX Server Information .....	7-25
Launching the MATLAB ActiveX Server .....	7-25
Establishing Multiple Connections .....	7-25
Using MATLAB As a DCOM Server .....	7-26
<b>Dynamic Data Exchange (DDE) .....</b>	<b>7-27</b>
DDE Concepts and Terminology .....	7-27
The Service Name .....	7-28
The Topic .....	7-28
The Item .....	7-28
Clipboard Formats .....	7-28

Accessing MATLAB As a Server .....	7-29
The DDE Name Hierarchy .....	7-30
MATLAB DDE Topics .....	7-30
Example: Using Visual Basic and the MATLAB DDE Server .....	7-33
Using MATLAB As a Client .....	7-34
DDE Advisory Links .....	7-36
<b>Calling MATLAB from AppleScript .....</b>	<b>7-38</b>
<b>Apple Event Interface .....</b>	<b>7-39</b>
Before You Begin .....	7-39
What Are Apple Events? .....	7-39
MATLAB As a Server Application .....	7-40
Do Script Apple Event .....	7-41
Do Script Event Notes .....	7-42
Copy Apple Event .....	7-45
Copy Event Notes .....	7-45
Result Codes .....	7-46
Sample Apple Events .....	7-47
Hints About Using Apple Events with MATLAB .....	7-58

## System Setup

<b>Custom Building MEX-Files .....</b>	<b>8-2</b>
Locating the Default Options File .....	8-4
UNIX .....	8-5
Windows .....	8-7
Linking DLLs to MEX-Files .....	8-9
Versioning MEX-Files .....	8-9
Compiling MEX-Files with the Microsoft Visual C++ IDE .....	8-9
Macintosh — MPW .....	8-10

Macintosh — Metrowerks CodeWarrior .....	8-12
CodeWarrior 10 & 11: Building on a Power Macintosh .....	8-14
CodeWarrior 10 & 11: Building on a Motorola 680x0-based Macintosh .....	8-17
CodeWarrior 10 & 11: Building FAT .....	8-19
<b>Troubleshooting .....</b>	<b>8-21</b>
MEX-File Creation .....	8-21
Understanding MEX-File Problems .....	8-22
MEX-Files Built with MPW on 68K Macintoshes .....	8-25
MEX-Files Created in Watcom IDE .....	8-26
so_locations Error on SGI .....	8-26
Memory Management Compatibility Issues .....	8-27
Improperly Destroying an mxArray .....	8-27
Incorrectly Constructing a Cell or Structure mxArray .....	8-28
Creating a Temporary mxArray with Improper Data .....	8-29
Potential Memory Leaks .....	8-30
MEX-Files Should Destroy Their Own Temporary Arrays .....	8-31

## API Functions

---

# A

C MX-Functions .....	A-2
C MEX-Functions .....	A-4
C MAT-File Routines .....	A-5
C Engine Routines .....	A-6
Fortran MX-Functions .....	A-6
Fortran MEX-Functions .....	A-7
Fortran MAT-File Routines .....	A-8
Fortran Engine Routines .....	A-8
DDE Routines .....	A-9

## **Directory Organization**

---

**B**

<b>Directory Organization on UNIX .....</b>	<b>B-3</b>
<b>Directory Organization on Windows .....</b>	<b>B-7</b>
<b>Directory Organization on Macintosh .....</b>	<b>B-11</b>

## Preface

<b>Using This Guide .....</b>	<b>xi</b>
<b>Typographical Conventions .....</b>	<b>xii</b>
<b>Related Products .....</b>	<b>xiii</b>
<b>About the Author .....</b>	<b>xv</b>

## The System Identification Problem

1

<b>Common Terms Used in System Identification .....</b>	<b>1-4</b>
<b>Basic Information About Dynamic Models .....</b>	<b>1-6</b>
The Signals .....	1-6
The Basic Dynamic Model .....	1-7
Variants of Model Descriptions .....	1-7
How to Interpret the Noise Source .....	1-8
Terms to Characterize the Model Properties .....	1-10
<b>The Basic Steps of System Identification .....</b>	<b>1-12</b>
<b>A Startup Identification Procedure .....</b>	<b>1-14</b>
Step 1: Looking at the Data .....	1-14
Step 2: Getting a Feel for the Difficulties .....	1-14
Step 3: Examining the Difficulties .....	1-15
Step 4: Fine Tuning Orders and Disturbance Structures .....	1-16
Multivariable Systems .....	1-18
<b>Reading More About System Identification .....</b>	<b>1-21</b>

The Model and Data Boards .....	2-2
The Working Data .....	2-3
The Views .....	2-3
The Validation Data .....	2-4
The Work Flow .....	2-4
Management Aspects .....	2-4
Workspace Variables .....	2-5
Help Texts .....	2-6
<b>Handling Data .....</b>	<b>2-7</b>
Getting Input-Output Data into the GUI .....	2-8
Taking a Look at the Data .....	2-10
Preprocessing Data .....	2-11
Checklist for Data Handling .....	2-13
Simulating Data .....	2-13
<b>Estimating Models .....</b>	<b>2-15</b>
Direct Estimation of the Impulse Response .....	2-15
Direct Estimation of the Frequency Response .....	2-16
Estimation of Parametric Models .....	2-17
ARX Models .....	2-20
ARMAX, Output-Error and Box-Jenkins Models .....	2-23
State-Space Models .....	2-25
User Defined Model Structures .....	2-26
<b>Examining Models .....</b>	<b>2-28</b>
Views and Models .....	2-28
The Plot Windows .....	2-29
Frequency Response and Disturbance Spectra .....	2-30
Transient Response .....	2-30
Poles and Zeros .....	2-31
Compare Measured and Model Output .....	2-31
Residual Analysis .....	2-32
Text Information .....	2-33
LTI Viewer .....	2-33
Further Analysis in the MATLAB Workspace .....	2-34

<b>Some Further GUI Topics</b> .....	<b>2-35</b>
Troubleshooting in Plots .....	2-36
Layout Questions and idprefs.mat .....	2-36
Customized Plots .....	2-37
What Cannot be Done Using the GUI .....	2-37

## Tutorial

**3**

<b>The Toolbox Commands</b> .....	<b>3-3</b>
<b>An Introductory Example to Command Mode</b> .....	<b>3-5</b>
<b>The System Identification Problem</b> .....	<b>3-9</b>
Polynomial Representation of Transfer Functions .....	3-11
State-Space Representation of Transfer Functions .....	3-13
Continuous-Time State-Space Models .....	3-14
Estimating Impulse Responses .....	3-15
Estimating Spectra and Frequency Functions .....	3-15
Estimating Parametric Models .....	3-16
Subspace Methods for Estimating State-Space Models .....	3-17
<b>Data Representation and Nonparametric Model</b>	
<b>Estimation</b> .....	<b>3-18</b>
Correlation Analysis .....	3-19
Spectral Analysis .....	3-19
More on the Data Representation in iddata .....	3-21
<b>Parametric Model Estimation</b> .....	
ARX Models .....	3-26
AR Models .....	3-26
General Polynomial Black-Box Models .....	3-27
State-Space Models .....	3-28
Optional Variables .....	3-30

<b>Defining Model Structures</b> . . . . .	<b>3-35</b>
Polynomial Black-Box Models: The <code>idpoly</code> Model	3-36
Multivariable ARX Models: The <code>idarx</code> Model	3-37
Black-Box State-Space Models: the <code>idss</code> Model	3-39
Structured State-Space Models with Free Parameters: the <code>idss</code> Model	3-42
State-Space Models with Coupled Parameters: the <code>idgrey</code> Model	3-44
State-Space Structures: Initial Values and Numerical Derivatives	3-47
 <b>Examining Models</b> . . . . .	<b>3-49</b>
Parametric Models: <code>idmodel</code> and its children	3-49
Frequency Function Format: the <code>idfrd</code> model	3-55
Graphs of Model Properties	3-56
Transformations to Other Model Representations	3-59
Discrete and Continuous Time Models	3-60
 <b>Model Structure Selection and Validation</b> . . . . .	<b>3-63</b>
Comparing Different Structures	3-63
Impulse Response to Determine Delays	3-66
Checking Pole-Zero Cancellations	3-66
Residual Analysis	3-66
Model Error Models	3-67
Noise-Free Simulations	3-68
Assessing the Model Uncertainty	3-68
Comparing Different Models	3-70
Selecting Model Structures for Multivariable Systems	3-70
 <b>Dealing with Data</b> . . . . .	<b>3-74</b>
Outliers and Bad Data; Multi-Experiment Data	3-74
Missing Data	3-75
Filtering Data: Focus	3-75
Feedback in Data	3-76
Delays	3-77

<b>Recursive Parameter Estimation</b> .....	<b>3-78</b>
The Basic Algorithm .....	3-78
Choosing an Adaptation Mechanism and Gain .....	3-79
Available Algorithms .....	3-81
Segmentation of Data .....	3-83
<b>Some Special Topics</b> .....	<b>3-85</b>
Periodic Inputs .....	3-87
Connections Between the Control System Toolbox and the System Identification Toolbox .....	3-87
Memory - Speed Trade-Offs .....	3-89
Local Minima .....	3-90
Initial Parameter Values .....	3-90

## Introduction

1

<b>What Is the Control System Toolbox?</b> .....	<b>1-2</b>
<b>Installation</b> .....	<b>1-3</b>
<b>Using the Documentation</b> .....	<b>1-4</b>
<b>Related Products</b> .....	<b>1-6</b>
<b>Typographic Conventions</b> .....	<b>1-8</b>

## Building Models

2

<b>Introduction</b> .....	<b>2-2</b>
<b>Linear Models</b> .....	<b>2-3</b>
Linear Model Representations .....	2-3
SISO Example: the DC Motor .....	2-4
Constructing SISO Models .....	2-6
Discrete Time Systems .....	2-10
Adding Delays to Linear Models .....	2-11
LTI Objects .....	2-11
<b>MIMO Models</b> .....	<b>2-13</b>
MIMO Example: Jet Transport Aircraft .....	2-13
Constructing MIMO Transfer Functions .....	2-15
Accessing I/O Pairs in MIMO Systems .....	2-17
<b>Arrays of Linear Models</b> .....	<b>2-18</b>
<b>Model Characteristics</b> .....	<b>2-21</b>

<b>Interconnecting Linear Models</b> .....	<b>2-22</b>
Feedback Interconnection .....	2-23
<b>Continuous/Discrete Conversions</b> .....	<b>2-24</b>
Discrete DC Motor Model .....	2-24
<b>Model Order Reduction</b> .....	<b>2-26</b>
Example: Gasifier Model .....	2-26

## Analyzing Models

# 3

<b>Introduction</b> .....	<b>3-2</b>
<b>LTI Viewer</b> .....	<b>3-4</b>
Example: Time and Frequency Responses of the DC Motor .....	3-4
Right-Click Menus .....	3-6
Displaying Response Characteristics on a Plot .....	3-8
Changing Plot Type .....	3-11
Showing Multiple Response Types .....	3-13
Comparing Multiple Models .....	3-14
<b>Functions for Time and Frequency Response</b> .....	<b>3-18</b>
Time and Frequency Responses .....	3-18
Plotting MIMO Model Responses .....	3-20
Data Markers .....	3-23
Plotting and Comparing Multiple Systems .....	3-24
Creating Custom Plots .....	3-27
<b>Simulink LTI Viewer</b> .....	<b>3-30</b>
Using the Simulink LTI Viewer .....	3-30
Comparing Linear and Nonlinear Models .....	3-31
Bode Plots of Linearized Models .....	3-38
Specifying Operating Conditions .....	3-43

# Designing Compensators

4

<b>Introduction .....</b>	<b>4-2</b>
<b>The SISO Design Tool .....</b>	<b>4-3</b>
Opening the SISO Design Tool .....	4-3
Importing Models into the SISO Design Tool .....	4-5
Feedback Structure .....	4-6
Loop Responses .....	4-7
<b>Bode Diagram Design .....</b>	<b>4-8</b>
Example: DC Motor .....	4-8
Adjusting the Compensator Gain .....	4-8
Right-Click Menus .....	4-9
Adjusting the Bandwidth .....	4-9
Adding an Integrator .....	4-12
Adding a Lead Network .....	4-14
Moving Compensator Poles and Zeros .....	4-17
Changing Units on a Plot .....	4-19
Adding a Notch Filter .....	4-20
<b>Root Locus Design .....</b>	<b>4-24</b>
Example: Electrohydraulic Servomechanism .....	4-25
Changing the Compensator Gain .....	4-30
Adding Poles and Zeros to the Compensator .....	4-31
Editing Compensator Pole and Zero Locations .....	4-36
Exporting the Compensator and Models .....	4-39
Storing and Retrieving Intermediate Designs .....	4-40
<b>Functions For Compensator Design .....</b>	<b>4-42</b>
Root Locus Design .....	4-42
Pole Placement .....	4-42
Linear-Quadratic-Gaussian (LQG) Design .....	4-46
Example: LQG Design .....	4-51
Example: LQG Design for Set Point Tracking .....	4-55

How to Use the Documentation Set .....	iii
<b>Typographical and Alphabetic Conventions</b> .....	iv

## Introduction

1

<b>Overview</b> .....	1-2
High-Level Graphics .....	1-3
Handle Graphics .....	1-3
Building Interactive GUIs .....	1-3
How It All Fits Together .....	1-4
Where To Begin .....	1-4

## Building 2-D Graphs

2

<b>Building a 2-D Graph</b> .....	2-2
<b>Figure Windows</b> .....	2-3
Multiple Axis Regions (subplot) .....	2-3
Default Color Scheme .....	2-5
<b>Elementary Plotting Functions</b> .....	2-7

Creating a Plot . . . . .	2-7
Adding Plots to an Existing Graph ( <i>hold</i> ) . . . . .	2-9
Matrix Data Plots . . . . .	2-10
Imaginary and Complex Data . . . . .	2-12
<b>Basic Plot Control</b> . . . . .	<b>2-14</b>
Colors, Line Styles, and Markers . . . . .	2-14
Axis Limits . . . . .	2-15
Axis Tick Marks . . . . .	2-16
Axes Aspect Ratio . . . . .	2-17
<b>Graph Annotation</b> . . . . .	<b>2-19</b>
Labeling the Individual Axes . . . . .	2-19

## Building 3-D Graphs

# 3

<b>Building a 3-D Graph</b> . . . . .	<b>3-2</b>
<b>Elementary 3-D Plotting Functions</b> . . . . .	<b>3-3</b>
Line Plots in 3-D . . . . .	3-3
<b>Representing a Matrix as a Surface</b> . . . . .	<b>3-5</b>
Mesh and Surface Plots . . . . .	3-5
Visualizing Functions of Two Variables . . . . .	3-6
Parametric Surfaces . . . . .	3-9
Hidden Line Removal . . . . .	3-11
<b>Coloring Mesh and Surface Plots</b> . . . . .	<b>3-12</b>
Colormaps and Indexed Colors . . . . .	3-12
Truecolor . . . . .	3-17
Texture Mapping . . . . .	3-19
<b>Lighting</b> . . . . .	<b>3-21</b>
Light Objects . . . . .	3-21
Properties That Affect Lighting . . . . .	3-22

<b>Controlling the Effects of Lighting</b> .....	<b>3-24</b>
Face and Edge Lighting Methods .....	3-24
Reflectance Characteristics of Graphics Objects .....	3-25
<b>Lighting Example</b> .....	<b>3-30</b>
<b>Viewpoint Control</b> .....	<b>3-32</b>
Setting the Viewpoint .....	3-32
<b>Camera Properties</b> .....	<b>3-35</b>
Default Behavior .....	3-36
Moving In and Out on the Scene .....	3-37
Revolving Around the Scene .....	3-39
<i>Translating the Viewpoint</i> .....	3-41
<b>View Projection Types</b> .....	<b>3-43</b>
Projection Types and Camera Location .....	3-44
<b>Aspect Ratio</b> .....	<b>3-47</b>
Stretch-to-fill .....	3-47
axis Command Options .....	3-47
<b>Properties That Affect Aspect Ratio</b> .....	<b>3-51</b>
Default Behavior .....	3-52
Overriding Stretch-to-Fill .....	3-54
Specifying the Aspect Ratio .....	3-55

## Specialized Graphs

**4**

<b>Bar and Area Graphs</b> .....	<b>4-2</b>
Bar Graph .....	4-2
Overlaying Plots on Bar Graphs .....	4-8
Area Graphs .....	4-10
<b>Pie Charts</b> .....	<b>4-13</b>
Pie Charts Missing a Piece .....	4-15

<b>Histograms</b> . . . . .	<b>4-16</b>
Histograms in Cartesian Coordinate Systems . . . . .	4-16
Histograms in Polar Coordinate Systems . . . . .	4-17
<b>Discrete Data Graphs</b> . . . . .	<b>4-20</b>
Two- and Three-dimensional Stem Plots . . . . .	4-20
Stairstep Plots . . . . .	4-26
<b>Direction and Velocity Vector Graphs</b> . . . . .	<b>4-28</b>
Compass Plots . . . . .	4-28
Feather Plots . . . . .	4-29
Quiver Plots . . . . .	4-31
<b>Contour Plots</b> . . . . .	<b>4-34</b>
Creating Simple Contour Plots . . . . .	4-34
Labeling Contours . . . . .	4-36
Filled Contours . . . . .	4-37
Drawing a Single Contour Line at a Desired Level . . . . .	4-38
The Contouring Algorithm . . . . .	4-38
Changing the Offset of a Contour . . . . .	4-40
Displaying Contours in Polar Coordinates . . . . .	4-40
<b>Interactive Plotting</b> . . . . .	<b>4-43</b>
<b>Animation</b> . . . . .	<b>4-45</b>
Movies . . . . .	4-45
Erase Modes . . . . .	4-47

## Images

# 5

<b>Overview</b> . . . . .	<b>5-2</b>
<b>Image Types</b> . . . . .	<b>5-3</b>
Indexed Images . . . . .	5-3
Intensity Images . . . . .	5-3
Truecolor Images . . . . .	5-4

<b>Summary of Image Types and Display Methods</b>	<b>5-5</b>
<b>Working with 8-Bit Images</b>	<b>5-6</b>
8-Bit Indexed Images	5-6
8-Bit Intensity Images	5-7
8-Bit Truecolor Images	5-7
Summary of Image Types and Numeric Class	5-8
Other 8-Bit Array Support	5-9
<b>Controlling Aspect Ratio and Display Size</b>	<b>5-10</b>
Printing Images	5-13
<b>The Image Object and its Properties</b>	<b>5-14</b>
CData	5-14
CDataMapping	5-14
XData and YData	5-15
EraseMode	5-17
<b>Reading and Writing Image Files</b>	<b>5-19</b>

## 3-D Modeling

HPGL Compatible Plotters (-dpgl) .....	7-18
Adobe Illustrator 88 (-dill) .....	7-20
Saving and Reloading Figures (-dmfile) .....	7-20
PC-Specific Options .....	7-21
Macintosh-Specific Options .....	7-24
<b>Printing Tips and Troubleshooting</b> .....	<b>7-25</b>
Controlling Output Size and Aspect Ratio .....	7-25
Specifying Fonts and Character Sets .....	7-27
Specifying Line Styles .....	7-29
Selecting the Rendering Method .....	7-32
Changing Background Colors .....	7-35
Setting Printing Preferences (Macintosh) .....	7-36
<b>Using MATLAB Graphics in Other Applications</b> .....	<b>7-37</b>
Creating Graphics Files .....	7-37
Importing MATLAB Graphics into Other Applications .....	7-40

<b>Handle Graphics Organization</b> .....	8-2
Graphics Objects .....	8-2
Object Properties .....	8-7
<b>Graphics Object Creation Functions</b> .....	8-10
Example – Creating Graphics Objects .....	8-11
Parenting .....	8-12
High-Level Versus Low-Level .....	8-13
Simplified Calling Syntax .....	8-13
<b>Using set and get</b> .....	8-15
Setting Property Values .....	8-15
Getting Property Values .....	8-17
Factory-Defined Property Values .....	8-19
<b>Default Property Values</b> .....	8-20
Specifying Default Values .....	8-22
Examples – Setting Defaults .....	8-23
<b>Accessing Object Handles</b> .....	8-26
The Current Figure, Axes, and Object .....	8-26
Searching for Objects by Property Values — <code>findobj</code> .....	8-28
Copying and Deleting Objects .....	8-29
<b>Controlling Graphics Output</b> .....	8-32
Specifying the Target for Graphics Output .....	8-32
Preparing Figures and Axes for Graphics .....	8-32
Testing for Hold State .....	8-37
Protecting Figures and Axes .....	8-38
<b>Efficient Programming</b> .....	8-43
Save Information First .....	8-43
<b>Properties Changed by Built-in Functions</b> .....	8-44

<b>Introduction</b> .....	<b>9-2</b>
<b>Figure Properties</b> .....	<b>9-3</b>
<b>Positioning Figures</b> .....	<b>9-4</b>
The Position Vector .....	9-4
Example — Specifying Figure Position .....	9-6
<b>Controlling Color</b> .....	<b>9-7</b>
Indexed Color Displays .....	9-7
Colormap Colors and Fixed Colors .....	9-8
Using a Large Number of Colors .....	9-9
Nonactive Figures and Shared Colors .....	9-11
Dithering Truecolor on Indexed Color Systems .....	9-12
<b>Rendering Options</b> .....	<b>9-14</b>
Backing Store .....	9-14
Z-Buffer .....	9-14
<b>Figure Pointers</b> .....	<b>9-16</b>
Custom Pointers .....	9-17
<b>Printing Figures</b> .....	<b>9-20</b>
Positioning the Figure on the Printed Page .....	9-20
Examples — Readjusting PaperPosition .....	9-22
Reversing Figure Colors .....	9-23
<b>Interactive Graphics</b> .....	<b>9-26</b>

<b>Axes Properties</b> .....	<b>10-2</b>
------------------------------	-------------

<b>Labeling and Appearance Properties</b>	10-4
TeX Characters	10-6
<b>Adding Text to Axes</b>	10-8
Text Alignment	10-9
Using Variables in Text Strings	10-10
Example – Text Annotation	10-10
Example – Multiline Text	10-12
<b>Positioning Axes</b>	10-13
The Position Vector	10-13
Units	10-14
Multiple Axes	10-15
<b>Individual Axis Control</b>	10-18
Changing Axis Limits	10-18
Setting Tick Mark Locations	10-20
Changing Axis Direction	10-21
<b>Automatic-Mode Properties</b>	10-23
<b>Multiaxis Axes</b>	10-26
Example – Double Axis Graphs	10-26
<b>Colors Controlled By Axes</b>	10-29
Axes Colors	10-29
Axes Color Limits – The CLim Property	10-31
Color of Lines Used for Plotting	10-35
