PREFACE

1	INTRODUCTION	1
1.1	The Control Problem	3
1.2	Examples of Control Systems	5
1.3	Short History of Control	9
	References	11
2	MODELS OF PHYSICAL SYSTEMS	12
2.1	System Modeling	12
2.2	Electrical Circuits	14
2.3	Block Diagrams and Signal Flow Graphs	21
2.4	Mason's Gain formula	24
2.5	Mechanical Translational Systems	29
2.6	Mechanical Rotational Systems	34
2.7	Electromechanical Systems	36
2.8	Sensors	41
2.9	Temperature-Control System	46
2.10	Analogous Systems	48
2.11	Transformers and Gears	50
2.12	Robotic Control System	52
2.13	System Identification	55
2.14	Linearization	55

2.15	Summary	55	
	References	57	
	Problems	58	
3	STATE-VARIABLE MODELS		69
3.1	State-Variable Modeling	70	
3.2	Simulation Diagrams	73	
3.3	Solution of State Equations	80	
3.4	Transfer Functions	87	
3.5	Similarity Transformations	89	
3.6	Digital Simulation	96	
3.7	Controls Software	101	
3.8	Analog Simulation	104	
3.9	Summary	106	
	References	107	
	Problems	107	
4	SYSTEM RESPONSES		121
4.1	Time Response of First-Order Systems	122	
4.2	Time Response of Second-Order Systems	127	
4.3	Time Response Specifications in Design	130	
4.4	Frequency Response of Systems	134	
4.5	Time and Frequency Scaling	141	
4.6	Response of Higher-Order Systems	143	
4.7	Reduced-Order Models	147	
4.8	Summary	148	
	References	148	
	Problems	148	
5	CONTROL SYSTEM CHARACTERISTICS		157
5.1	Closed-Loop Control System	158	
5.2	Stability	162	
5.3	Sensitivity	166	
5.4	Disturbance Rejection	170	
5.5	Steady-State Accuracy	175	
5.6	Transient Response	183	
5.7	Closed-Loop Frequency Response	185	
5.8	Summary	186	
	References	186	
	Problems	186	

6	STABILITY ANALYSIS	197
6.1	Routh–Hurwitz Stability Criterion	199
6.2	Roots of the Characteristic Equation	208
6.3	Stability by Simulation	209
6.4	Summary	210
	Problems	211
7	ROOT-LOCUS ANALYSIS AND DESIGN	220
7.1	Root-Locus Principles	220
7.2	Some Root-Locus Techniques	225
7.3	Additional Root-Locus Techniques	229
7.4	Additional Properties of the Root Locus	243
7.5	Other Configurations	246
7.6	Root-Locus Design	249
7.7	Phase-Lead Design	252
7.8	Analytical Phase-Lead Design	253
7.9	Phase-Lag Design	257
7.10	PID Design	262
7.11	Analytical PID Design	266
7.12	Complementary Root Locus	269
7.13	Compensator Realization	272
7.14	Summary	275
	References	276
	Problems	276
8	FREQUENCY-RESPONSE ANALYSIS	285
8.1	Frequency Responses	285
8.2	Bode Diagrams	291
8.3	Additional Terms	303
8.4	Nyquist Criterion	309
8.5	Application of the Nyquist Criterion	317
8.6	Relative Stability and the Bode Diagram	328
8.7	Closed-Loop Frequency Response	342
8.8	Frequency-Response Software	349
8.9	Summary	349
	References	350
	Problems	350

9	FREQUENCY-RESPONSE DESIGN	361
9.1	Control System Specifications	361
9.2	Compensation	366
9.3	Gain Compensation	368
9.4	Phase-Lag Compensation	373
9.5	Phase-Lead Compensation	377
9.6	Analytical Design	381
9.7	Lag-Lead Compensation	390
9.8	PID Controller Design	392
9.9	Analytical PID Controller Design	398
9.10	PID Controller Implementation	402
9.11	Frequency-Response Design Software	404
9.12	Summary	406
	References	407
	Problems	407
10	MODERN CONTROL DESIGN	418
10.1	Pole-Placement Design	419
10.2	Ackermann's Formula	422
10.3	State Estimation	427
10.4	Closed-Loop System Characteristics	436
10.5	Reduced-Order Estimators	438
10.6	Controllability and Observability	444
10.7	Systems with Inputs	450
10.8	Modern Control Software	458
10.9	Summary	459
	References	459
	Problems	460
11	DISCRETE-TIME SYSTEMS	468
11.1	Discrete-Time System	468
11.2	Transform Methods	471
11.3	Theorems of the z-transform	473
11.4	Solution of Difference Equations	476
11.5	Inverse z-Transform	479
11.6	Simulation Diagrams and Flow Graphs	481
11.7	State Variables	484
11.8	Solution of State Equations	486

11.9	Summary	490	
	References	490	
	Problems	491	
12	SAMPLED-DATA SYSTEMS		498
12.1	Sampled Data	498	
12.2	Ideal Sampler	500	
12.3	Properties of the Starred Transform	503	
12.4	Data Reconstruction	507	
12.5	Pulse Transfer Function	509	
12.6	Open-Loop Systems Containing Digital Filters	515	
12.7	Closed-Loop Discrete-Time Systems	517	
12.8	Transfer Functions for Closed-Loop Systems	518	
12.9	State Variables for Sampled-Data Systems	523	
12.10	Controls Software	528	
12.11	Summary	529	
	References	530	
	Problems	530	
13	ANALYSIS AND DESIGN OF DIGITAL CONTROL SYSTEMS		537
13.1	Two Examples	537	
13.2	Discrete System Stability	542	
13.3	Jury's Test	543	
13.4	Mapping the s -Plane into the z -Plane	545	
13.5	Root Locus	549	
13.6	Nyquist Criterion	551	
13.7	Bilinear Transformation	557	
13.8	Routh-Hurwitz Criterion	560	
13.9	Bode Diagram	561	
13.10	Steady-State Accuracy	564	
13.11	Design of Digital Control Systems	566	
13.12	Phase-Lag Design	570	
13.13	Phase-Lead Design	575	
13.14	Digital PID Controllers	578	
13.15	Root-Locus Design	582	
13.16	Control Software	585	
13.17	Summary	586	
	References	587	
	Problems	587	

14	NONLINEAR SYSTEM ANALYSIS	593
14.1	Nonlinear System Definitions and Properties	594
14.2	Review of the Nyquist Criterion	596
14.3	Describing Function	598
14.4	Derivations of Describing Functions	599
14.5	Use of the Describing Function	607
14.6	Stability of Limit Cycles	612
14.7	Design	616
14.8	Application to Other Systems	618
14.9	Linearization	618
14.10	Equilibrium States and Lyapunov Stability	623
14.11	State Plane Analysis	627
14.12	Linear-System Response	631
14.13	Method of Isoclines	634
14.14	Summary	640
	References	640
	Problems	641
	APPENDICES	647
A	Matrices	647
B	Design Equations	654
C	Laplace Transform	660
D	Laplace Transform and z-Transform Tables	675
	INDEX	677
