9.7 Multivariable Systems

10 Digital Control
Applied D

Preface	xi
---------	----

Chapter 1 Introduction to Automatic Controls	1
1.1 Historical Development	1
1.2 Feedback Control Systems	2
1.3 System Representation	4
1.4 Modern Control Systems	6
Chapter 2 Representation of Control Components	8
2.1 Operational Notation	9
2.2 Mechanical Components	14
2.3 Electrical Components	18
2.4 Series and Parallel Laws	19
2.5 Analogies	26
2.6 Scale Factors	29
2.7 Thermal Systems	33
2.8 Fluid Systems	36
Chapter 3 Representation of Control Systems	48
3.1 Linearization of Nonlinear Functions	48
3.2 Linearization of Operating Curves	58
3.3 Hydraulic Systems	62
3.4 Pneumatic Systems	70
3.5 DC Motors	74
3.6 AC Motors	79
3.7 Block-Diagram Algebra	80
3.8 Speed Control Systems	83
3.9 Generalized Feedback Control System	90

Chapter 4	Steady-State Operation	105
4.1	Steady-State Analysis	105
4.2	Equilibrium	113
4.3	Proportional Control Systems	116
4.4	Integral Control Systems	121
4.5	Proportional Plus Integral Control Systems	123
4.6	Modes of Control	126
Chapter 5	Laplace Transforms	135
5.1	Classical Methods	136
5.2	Laplace Transform Method	144
5.3	Transform Properties	148
5.4	Initial Conditions	162
5.5	General Procedures	168
5.6	Piecewise Continuous Functions	174
5.7	Convolution Integral	177
5.8	Error Coefficients	180
Chapter 6	Transient Response	192
6.1	Inverse Transformations	194
6.2	Complex Conjugate Zeros	196
6.3	Damping Ratio and Natural Frequency	202
6.4	Computer Solution	208
6.5	Transient Response Specifications	217
6.6	General Form of Transient Response	221
6.7	Response to an External Disturbance	223
6.8	Routh's Stability Criterion	225
6.9	Summary	229
Chapter 7	The Root-Locus Method	240
7.1	Significance of Root Loci	240
7.2	Construction of Loci	246
7.3	General Procedure	256
7.4	Newton's Method and the Remainder Theorem	266
7.5	Loci Equations	269
7.6	Variation of Parameters	271
7.7	Computer Solution	277
7.8	Sensitivity	278
Chapter 8	Analog Computers	292
8.1	Computer Operations	293
8.2	Direct Programming	297
8.3	Time Scale	308
8.4	Simulation	313

Chapter 9 State-Space Methods	329
9.1 System Representation	329
9.2 Signal-Flow Graphs	342
9.3 Solution of State-Space Equations	349
9.4 Methods of Computing $\Phi(t)$	353
9.5 Forced Response	362
9.6 Transfer Functions	369
9.7 Multivariable Systems	374
Chapter 10 Digital-Control Systems	390
10.1 Sampled-Data Systems	390
10.2 The z Transform	392
10.3 Inverse z Transforms	401
10.4 Block-Diagram Algebra	409
10.5 Transient Response	414
10.6 Filters	421
10.7 Discrete-Data Systems	427
10.8 Sampled-Data Control Systems	434
10.9 Computer-Controlled Systems	440
Chapter 11 Frequency-Response Methods	455
11.1 Frequency Response	455
11.2 Logarithmic Representation	461
11.3 Evaluating the Gain K	470
11.4 Equivalent Unity-Feedback Systems	473
11.5 Polar Plots	474
11.6 M and α Circles	477
11.7 Correlation between Transient and Frequency Response	480
11.8 Determining the Gain K to Yield a Desired M_p	490
Chapter 12 System Compensation	504
12.1 Nyquist Stability Criterion	504
12.2 Gain Margin and Phase Margin	513
12.3 Lead Compensation	519
12.4 Lag Compensation	526
12.5 Lag-Lead Compensation	530
12.6 Internal Feedback	533
12.7 Inverse Polar Plots	534
12.8 Stability Criteria in the Inverse Plane	540

Appendices

A	Equilibrium Flow	551
B	Fourier Series, Fourier Integral, and Laplace Transform	556
	B.1 Fourier Series	556
	B.2 Fourier Integral	558
	B.3 Laplace Transform	559
