00	Introduction	
01	Decision Making in Operations Research	
02	Mathematical Programming	
03	Linear Programming	
04	Network Programming	
05	Integer Programming	
06	Dynamic Programming	
07	Simulation	
08	Stochastic Programming	
09	Queueing Theory	
10	Inventory Control	
11	Transportation and Assignment Problems	
12	Shortage and Lost Sales	
13	Project Management	
14	Game Theory	
15	Decision Analysis	
16	Appendix A: Linear Programming	
17	Appendix B: Network Programming	
18	Appendix C: Integer Programming	
19	Appendix D: Dynamic Programming	
20	Appendix E: Simulation	
21	Appendix F: Stochastic Programming	
22	Appendix G: Queueing Theory	
23	Appendix H: Inventory Control	
24	Appendix I: Transportation and Assignment Problems	
25	Appendix J: Shortage and Lost Sales	
26	Appendix K: Project Management	
27	Appendix L: Game Theory	
28	Appendix M: Decision Analysis	
29	Index	

Chapter 1 **Decision Making in Operations Research** **1**

1.1	The Art and Science of Operations Research	1
1.2	Elements of a Decision Model	2
1.3	Art of Modeling	3
1.4	Types of OR Models	5
1.5	Effect of Data Availability on Modeling	6
1.6	Computations in OR	7
1.7	Phases of OR Study	8
1.8	About This Book	10
	Selected References	11

PART I MATHEMATICAL PROGRAMMING

Chapter 2 **Linear Programming: Formulations and Graphical Solution** **15**

2.1	A Two-Variable Model and Its Graphical Solution	16
2.1.1	Graphical Solution of LP Models	19
2.1.2	Sensitivity Analysis: An Elementary Presentation	22
2.2	LP Formulations	29
2.3	Additional LP Formulations	35

- 2.4 Summary 46
- Selected References 46
- Problems 46

Chapter 3 **Linear Programming: The Simplex Method** **58**

- 3.1 Overall Idea of the Simplex Method 59
- 3.2 Development of the Simplex Method 60
 - 3.2.1 Standard LP Form 60
 - 3.2.2 Basic Solutions 62
- 3.3 Primal Simplex Method 63
 - 3.3.1 Artificial Starting Solution for the Primal Simplex Method 71
- 3.4 Dual Simplex Method 78
- 3.5 Special Cases in Simplex Method Application 83
 - 3.5.1 Degeneracy 83
 - 3.5.2 Alternative Optima 85
 - 3.5.3 Unbounded Solution 87
 - 3.5.4 Infeasible Solution 89
- 3.6 Interpreting the Simplex Tableau: Sensitivity Analysis 90
 - 3.6.1 Optimum Solution 91
 - 3.6.2 Status of Resources 92
 - 3.6.3 Dual Price (Unit Worth of a Resource) 92
 - 3.6.4 Maximum Change in Resource Availability 94
 - 3.6.5 Maximum Change in Marginal Profit/Cost 96
- 3.7 Summary 98
 - Selected References 99
 - Problems 99

Chapter 4 **Linear Programming: Revised Simplex Method** **113**

- 4.1 Mathematical Foundations 113
 - 4.1.1 Standard LP Model in Matrix Form 114
 - 4.1.2 Basic Solutions and Bases 115
 - 4.1.3 The Simplex Tableau in Matrix Form 117
- 4.2 Revised (Primal) Simplex Method 121
 - 4.2.1 Product Form of the Inverse 121
 - 4.2.2 Steps of the Primal Revised Simplex Method 123
- 4.3 Summary 129
 - Selected References 129
 - Problems 129

Chapter 5 **Linear Programming: Duality, Sensitivity, and Parametric Analysis** **137**

- 5.1 Definition of the Dual Problem 138
- 5.2 Solution of the Dual Problem 143
 - 5.2.1 Relationship Between Primal and Dual Objective Values 144
 - 5.2.2 Optimal Dual Solution 145

5.3	Economic Interpretation of the Dual Problem	148
5.3.1	Dual Prices	149
5.3.2	Reduced Costs	151
5.4	Complementary Slackness	153
5.5	Postoptimal or Sensitivity Analysis	155
5.5.1	Changes Affecting Optimality	157
5.5.2	Changes Affecting Feasibility	162
5.5.3	Changes Affecting Optimality and Feasibility	166
5.6	Parametric Linear Programming	167
5.6.1	Changes in C	168
5.6.2	Changes in b	171
5.6.3	Changes in P_j	174
5.6.4	Simultaneous Changes in C and b	175
5.7	Summary	178
	Selected References	178
	Problems	179
Chapter 6	Linear Programming: Transportation Model	192
6.1	Definition and Applications of the Transportation Model	193
6.2	Solution of the Transportation Problem	202
6.2.1	The Transportation Technique	202
6.2.2	Improved Starting Solution	211
6.3	The Assignment Model	214
6.4	The Transshipment Model	219
6.5	Summary	226
	Selected References	226
	Problems	227
Chapter 7	Linear Programming: Additional Topics	239
7.1	Bounded Variables Primal Simplex Method	239
7.2	Decomposition Algorithm	245
7.3	Karmarkar Interior-Point Algorithm	255
7.3.1	Basic Idea of the Interior-Point Algorithm	255
7.3.2	Interior-Point Algorithm	256
7.4	Summary	263
	Selected References	264
	Problems	264
Chapter 8	Network Models	268
8.1	Network Definitions	269
8.2	Minimal Spanning Tree Problem	270
8.3	Shortest-Route Problem	273
8.3.1	Examples of the Shortest-Route Applications	273
8.3.2	Shortest-Route Algorithms	276
8.3.3	The Shortest-Route Problem Viewed As a Transshipment Model	280
8.4	Maximal-Flow Problem	282

- 8.5 Minimum-Cost Capacitated Flow Problem 287
 - 8.5.1 Special Cases of the Capacitated Network Model 289
 - 8.5.2 Linear Programming Formulation 290
 - 8.5.3 Capacitated Network Simplex Method 291
- 8.6 Summary 296
 - Selected References 296
 - Problems 297

Chapter 9 Integer Linear Programming 303

- 9.1 Illustrative Applications of Integer Programming 304
 - 9.1.1 Capital Budgeting Problem 304
 - 9.1.2 Fixed-Charge Problem 305
 - 9.1.3 Job-Shop Scheduling Problem 306
 - 9.1.4 Dichotomies 307
- 9.2 Solution Methods of Integer Programming 308
- 9.3 Branch-and-Bound Algorithm 309
- 9.4 Cutting-Plane Algorithms 315
 - 9.4.1 The Fractional (Pure Integer) Algorithm 316
 - 9.4.2 The Mixed Algorithm 323
- 9.5 Zero-One Integer Problem 325
 - 9.5.1 The Additive Algorithm 326
 - 9.5.2 Zero-One Polynomial Programming 333
- 9.6 Summary 335
 - Selected References 336
 - Problems 336

Chapter 10 Dynamic (Multistage) Programming 345

- 10.1 Elements of the DP Model: The Capital Budgeting Example 346
 - 10.1.1 DP Model 347
 - 10.1.2 Backward Recursive Equation 353
- 10.2 More on the Definition of the State 355
- 10.3 Examples of DP Models and Computations 357
- 10.4 Problem of Dimensionality in Dynamic Programming 370
- 10.5 Solution of Linear Programs by Dynamic Programming 371
- 10.6 Summary 373
 - Selected References 374
 - Problems 374

PART II PROBABILISTIC MODELS

Chapter 11 Data Representation in Operations Research 383

- 11.1 Nature of Data in OR 384
 - 11.1.1 Mean and Variance of a Data Set 384
 - 11.1.2 Empirical Probability Distributions 387
 - 11.1.3 Goodness-of-Fit Tests 390
 - 11.1.4 Summary of Common Distributions 392
 - 11.1.5 Nonstationarity of Data 399

- 11.2 Forecasting Techniques 401
 - 11.2.1 Regression Model 402
 - 11.2.2 Moving Average Model 404
 - 11.2.3 Exponential Smoothing 404
- 11.3 Summary 406
 - Selected References 406
 - Problems 407

Chapter 12 **Decision Theory and Games** 411

- 12.1 Decisions Under Risk 411
 - 12.1.1 Expected Value Criterion 413
 - 12.1.2 Expected Value-Variance Criterion 415
 - 12.1.3 Aspiration-Level Criterion 417
 - 12.1.4 Most Likely Future Criterion 419
 - 12.1.5 Experimental Data in Decisions Under Risk 420
- 12.2 Decision Trees 423
- 12.3 Decisions Under Uncertainty 426
 - 12.3.1 Laplace Criterion 427
 - 12.3.2 Minimax (Maximin) Criterion 428
 - 12.3.3 Savage Minimax Regret Criterion 428
 - 12.3.4 Hurwicz Criterion 429
- 12.4 Game Theory 430
 - 12.4.1 Optimal Solution of Two-Person Zero-Sum Games 431
 - 12.4.2 Mixed Strategies 432
 - 12.4.3 Graphical Solution of $(2 \times n)$ and $(m \times 2)$ Games 434
 - 12.4.4 Solution of $(m \times n)$ Games by Linear Programming 437
- 12.5 Summary 440
 - Selected References 441
 - Problems 441

Chapter 13 **Project Scheduling by PERT-CPM** 449

- 13.1 Arrow (Network) Diagram Representations 450
- 13.2 Critical Path Calculations 453
 - 13.2.1 Determination of the Critical Path 454
 - 13.2.2 Determination of the Floats 456
- 13.3 Construction of the Time Chart and Resource Leveling 457
- 13.4 Probability and Cost Considerations in Project Scheduling 461
 - 13.4.1 Probability Considerations in Project Scheduling 462
 - 13.4.2 Cost Considerations in Project Scheduling 464
- 13.5 Project Control 471
- 13.6 Summary 472
 - Selected References 472
 - Problems 472

Chapter 14 Inventory Models 479

- 14.1 The ABC Inventory System 480
- 14.2 A Generalized Inventory Model 481
- 14.3 Deterministic Models 484
 - 14.3.1 Single-Item Static Model (EOQ) 484
 - 14.3.2 Single-Item Static Model with Price Breaks 489
 - 14.3.3 Multiple-Item Static Model with Storage Limitation 491
 - 14.3.4 N -Period Production Scheduling Model 494
 - 14.3.5 Single-Item N -Period Dynamic EOQ Model 499
- 14.4 Probabilistic Models 514
 - 14.4.1 A Continuous Review Model 515
 - 14.4.2 Single-Period Models 519
 - 14.4.3 Multiperiod Models 526
- 14.5 Just-in-Time (JIT) Manufacturing System 532
- 14.6 Summary 533
 - Selected References 534
 - Problems 534

Chapter 15 Queueing Models 544

- 15.1 Basic Elements of the Queueing Model 545
- 15.2 Role of the Poisson and Exponential Distributions 547
- 15.3 Pure Birth and Pure Death Processes 550
 - 15.3.1 Pure Birth Model 550
 - 15.3.2 Pure Death Model 552
- 15.4 Queues with Combined Arrivals and Departures 553
 - 15.4.1 Generalized Poisson Model 555
 - 15.4.2 Steady-State Measures of Performance 558
- 15.5 Specialized Poisson Queues 560
 - 15.5.1 $(M/M/1) : (GD/\infty/\infty)$ 560
 - 15.5.2 $(M/M/1) : (GD/N/\infty)$ 564
 - 15.5.3 $(M/M/c) : (GD/\infty/\infty)$ 567
 - 15.5.4 $(M/M/c) : (GD/N/\infty), c \leq N$ 570
 - 15.5.5 $(M/M/\infty) : (GD/\infty/\infty)$ —Self-Service Model 572
 - 15.5.6 $(M/M/R) : (GD/K/K), R < K$ —Machine Servicing Model 573
- 15.6 Non-Poisson Queues 576
- 15.7 Queues with Priorities for Service 577
 - 15.7.1 $(M_i/G_i/1) : (NPRP/\infty/\infty)$ 578
 - 15.7.2 $(M_i/M/c) : (NPRP/\infty/\infty)$ 579
- 15.8 Tandem or Series Queues 581
 - 15.8.1 Two-Station Series Model with Zero Queue Capacity 581
 - 15.8.2 k -Station Series Model with Infinite Queue Capacity 583
- 15.9 Summary 585
 - Selected References 585
 - Numerical Problems 586
 - Theoretical Problems 595

644

PART

Chapter 16 **Queueing Theory in Practice** 598

- 16.1 Selection of Appropriate Queueing Model 598
- 16.2 Queueing Decision Models 600
 - 16.2.1 Cost Models 601
 - 16.2.2 Aspiration-Level Model 604
- 16.3 Summary 607
 - Selected References 607
 - Problems 607
 - Projects 611

Chapter 17 **Simulation Modeling with SIMNET II** 612

- 17.1 Introduction 613
- 17.2 SIMNET Modeling Framework 614
- 17.3 Statement Representation of SIMNET II Nodes 615
 - 17.3.1 Source Node 616
 - 17.3.2 Queue Node 617
 - 17.3.3 Facility Node 620
 - 17.3.4 Auxiliary Node 621
 - 17.3.5 Basic Rules for the Operation of Nodes 622
- 17.4 SIMNET II Mathematical Expressions 623
- 17.5 Layout of SIMNET II Model 626
- 17.6 Model Debugging in SIMNET II 630
- 17.7 Transaction Routing in SIMNET II 631
 - 17.7.1 Next-Node Routing 631
 - 17.7.2 Select Routing 632
 - 17.7.3 Direct Transfer Routing (*T or goto-field) 634
- 17.8 Branches in SIMNET II 637
 - 17.8.1 Branch Types (SUBF1) 638
 - 17.8.2 Branch Conditions (F2) 640
 - 17.8.3 Branch Assignments (F3) 640
 - 17.8.4 Statistical Variables (F4) 644
- 17.9 Logic Switches 646
- 17.10 Resources in SIMNET II 649
 - 17.10.1 Priority and Preemption of Resources 653
- 17.11 Assembling and Matching of Transactions 655
 - 17.11.1 Assemble Operation 655
 - 17.11.2 Match Operation 657
- 17.12 Special Assignments 659
 - 17.12.1 Source Node Activation and Deactivation 660
 - 17.12.2 Queue Parameters Control 661
 - 17.12.3 File Manipulation Assignments 661
 - 17.12.4 Locating Entries in Files 665
 - 17.12.5 Run Length Control 667
 - 17.12.6 Other Special Assignments 667
- 17.13 Initial Data 667
 - 17.13.1 Initial File Entries 668
 - 17.13.2 Discrete and Discretized Continuous Density Functions 669
 - 17.13.3 Table Look-Up Functions 669
 - 17.13.4 Initialization of Array Elements 670

- 17.13.5 Initialization of Nonsubscripted Variables 672
- 17.13.6 Mathematical Functions 672
- 17.14 Initializing Nodes and Resources with Run-Dependent Data 673
- 17.15 Gathering Statistical Observations 673
- 17.16 Other SIMNET II Capabilities 675
- 17.17 Summary 675
- Selected References 676
- Problems 676

Chapter 18 **Markovian Decision Process** **682**

- 18.1 Scope of the Markovian Decision Problem: The Gardener Example 683
- 18.2 Finite-Stage Dynamic Programming Model 685
- 18.3 Infinite-Stage Model 689
 - 18.3.1 Exhaustive Enumeration Method 690
 - 18.3.2 Policy Iteration Method Without Discounting 693
 - 18.3.3 Policy Iteration Method with Discounting 696
- 18.4 Linear Programming Solution of the Markovian Decision Problem 699
- 18.5 Summary 702
- 18.6 Appendix: Review of Markov Chains 702
 - 18.6.1 Markov Processes 703
 - 18.6.2 Markov Chains 703
 - Selected References 709
 - Problems 709

PART III **NONLINEAR PROGRAMMING**

Chapter 19 **Classical Optimization Theory** **715**

- 19.1 Unconstrained Extremal Problems 715
 - 19.1.1 Necessary and Sufficient Conditions for Extrema 717
 - 19.1.2 The Newton–Raphson Method 720
- 19.2 Constrained Extremal Problems 722
 - 19.2.1 Equality Constraints 722
 - 19.2.2 Inequality Constraints 737
- 19.3 Summary 744
 - Selected References 744
 - Problems 744

Chapter 20 **Nonlinear Programming Algorithms** **749**

- 20.1 Unconstrained Nonlinear Algorithms 749
 - 20.1.1 Direct Search Method 750
 - 20.1.2 Gradient Method 751

20.2	Constrained Nonlinear Algorithms	754
20.2.1	Separable Programming	755
20.2.2	Quadratic Programming	762
20.2.3	Geometric Programming	765
20.2.4	Stochastic Programming	770
20.2.5	Linear Combinations Method	773
20.2.6	SUMT Algorithm	775
20.3	Summary	776
	Selected References	776
	Problems	777

APPENDIXES

Appendix A **Review of Vectors and Matrices** **781**

A.1	Vectors	781
A.1.1	Definition of a Vector	781
A.1.2	Addition (Subtraction) of Vectors	781
A.1.3	Multiplication of Vectors by Scalars	782
A.1.4	Linearly Independent Vectors	782
A.2	Matrices	782
A.2.1	Definition of a Matrix	782
A.2.2	Types of Matrices	783
A.2.3	Matrix Arithmetic Operations	783
A.2.4	The Determinant of a Square Matrix	785
A.2.5	Nonsingular Matrix	786
A.2.6	The Inverse of a Matrix	787
A.2.7	Methods of Computing the Inverse of a Matrix	788
A.3	Quadratic Forms	790
A.4	Convex and Concave Functions	791
	Selected References	792
	Problems	792

Appendix B **Software (TORA and SIMNET II) Installation and Execution** **794**

B.1	TORA System	794
B.2	SIMNET II System	795

Answers to Selected Problems **797**

Index **813**
