	PREFACE	v
	ABOUT THE EDITOR	ix
	CONTRIBUTORS	x
	ILLUSTRATION CREDITS	xi
CHAPTER 1	INTRODUCTION TO MULTIVARIABLE CONTROL	1
CHAPTER 2	THE RELATIVE GAIN ANALYSIS	8
	2.1 General,	8
	2.2 The Perspective Used in Relative Gain Analysis,	8
	2.3 Definition of Relative Gain,	10
	2.4 Interpretation and Use of the RGA,	11
	2.5 Introduction to the Relative Disturbance Gain,	16
	2.6 Some Properties of the RGA for $n \times n$ Systems,	18
	2.7 Scaling and the Ratio Nature of the Relative Gain,	20
	2.8 Calculating the Relative Gain for Integrating Processes,	22
	2.9 Additional Examples for $2 \times 2$ Systems,	23
	2.10 Decoupling Control,	28
	2.11 Conclusion,	32
	References,	33
CHAPTER 3	SINGULAR VALUE ANALYSIS	34
	3.1 Introduction,	34
	3.2 Singular Value Decomposition,	34
	3.3 SVD Framework for Multivariable Control,	40
	3.4 Significant Degrees of Freedom,	41
	3.5 Determining Good Sensor Locations,	44
	3.6 Selecting Proper Manipulated Variables,	55
	3.7 Selecting Sensor Type,	56
	3.8 Controller Pairing with SVD,	58
	3.9 Impact of SVD on Basic Process Design,	59

- 3.10 Simulation vs. Experimental Studies, 60
- 3.11 SVD "Profile" Controller, 63
- 3.12 Summary, 64
- References, 65

**CHAPTER 4                   MULTILOOP CONTROLLER DESIGN       66**

- 4.1 Biggest Log Modulus Tuning, 66
- 4.2 IMC Multiloop Controller, 70
- References, 72

**CHAPTER 5                   INVERSE AND DIRECT NYQUIST ARRAYS       73**

- 5.1 Overview of the INA and DNA Methods, 73
- 5.2 Multivariable System Notation, Concepts, and Stability Theory, 74
- 5.3 Achieving Diagonal Dominance, 87
- 5.4 INA Design Methodology, 88
- 5.5 DNA Design Methodology, 107
- 5.6 Conclusions, 111
- References, 112

**CHAPTER 6                   MODEL PREDICTIVE CONTROL       114**

- 6.1 Internal Model Control, 115
- 6.2 Simplified Model Predictive Control, 171
- Notation, 200
- References, 205

**CHAPTER 7                   MODERN CONTROL THEORY       206**

- 7.1 Introduction, 206
- 7.2 State Variables and the State-Space Description of Systems, 207
- 7.3 Controllability and Observability in Linear Systems, 218
- 7.4 Optimal Control and the Linear Quadratic Regulator, 221
- 7.5 Conclusions, 236
- References, 238

**APPENDIX                   TO PROVE EQUIVALENCE OF EQUATIONS (6.36) AND (6.38)       241**
