Chapter 1: opportunity and risk in a globalized Latin American and	
the Caribbean	1
Latin America and the Caribbean's performance improved I the 1990s	
Opportunities and risks	
Why economic insecurity?	3
This report	
LACs volatility is high but has not risen in the 1990s	6
Dealing with economic insecurity requires a comprehensive insurance	
approach	
LACs volatility arises from multiple sources domestic and foreign	7
Governments can do much to reduce volatility even in a globalized	-
economy	
External risks can be reduced by diversification and liquidity management	
Anticyclical macroeconomic policies ease adjustment to shocks	
Deeper and stronger financial systems are a key part of social protection	8
policies	J
Deep crises are participatory damaging for the poor	
The poor try to protect their long-term welfare in crises as long as their	
assets permit	
New income support programs for the Unemployed need to be	9
established	Ü
Administrative capacity and labor policies are key in the choice of	
instruments	
Self-insurance for slow-reforming economies	
Unemployment insurance for advanced reforming economies	
Public works programs provide insurance support for informal sector	10
workers	
Targeted programs for the poor need to be better protected in downturns	
Save in good times to finance social spending in bad times	
Supranational action and the role of the international financial institutions	
Myths and realities about economic volatility	
Securing our future	11
